2026

Cyber GRC, Risk and Data Privacy

Start Your Career in Cyber Security

About Eduden

Welcome to Eduden — where we've thrown boring education out the window and replaced it with hands-on learning, real-world skills, and a vibe that actually makes sense in 2026.

We're not your grandma's school (unless she's into coding, design, and memes). At Eduden, we're flipping the traditional classroom upside down. No whiteboards full of buzzwords. No endless theory. Just solid skills, taught by international trainers, that get you job-ready fast.

Whether you want to be a freelance graphic designer, a Python wizard, a networking pro, or a UI/UX boss, we've got your back. Our hybrid courses (online + offline) are packed with real projects, 100+ practical tasks, and mentorship that doesn't feel robotic. You'll be creating, building, and earning while still laughing at our bad jokes.

And the best part? We don't just teach you and send you off.

Cyber GRC, Risk and Data Privacy

Opening Course Description

Cybersecurity is not only about hacking. Companies also need people who can manage risk, write policies, understand compliance, protect data, support audits, and help teams follow safe digital practices.

This course by Eduden is designed for management, commerce, law, audit, finance, and non technical students who want to enter cybersecurity through governance, risk, compliance, and privacy.

Suggested Category: AI and Tech for Non Technical Careers

Secondary Category: Cyber Security

Duration: 90 Days

Lecture: 45+

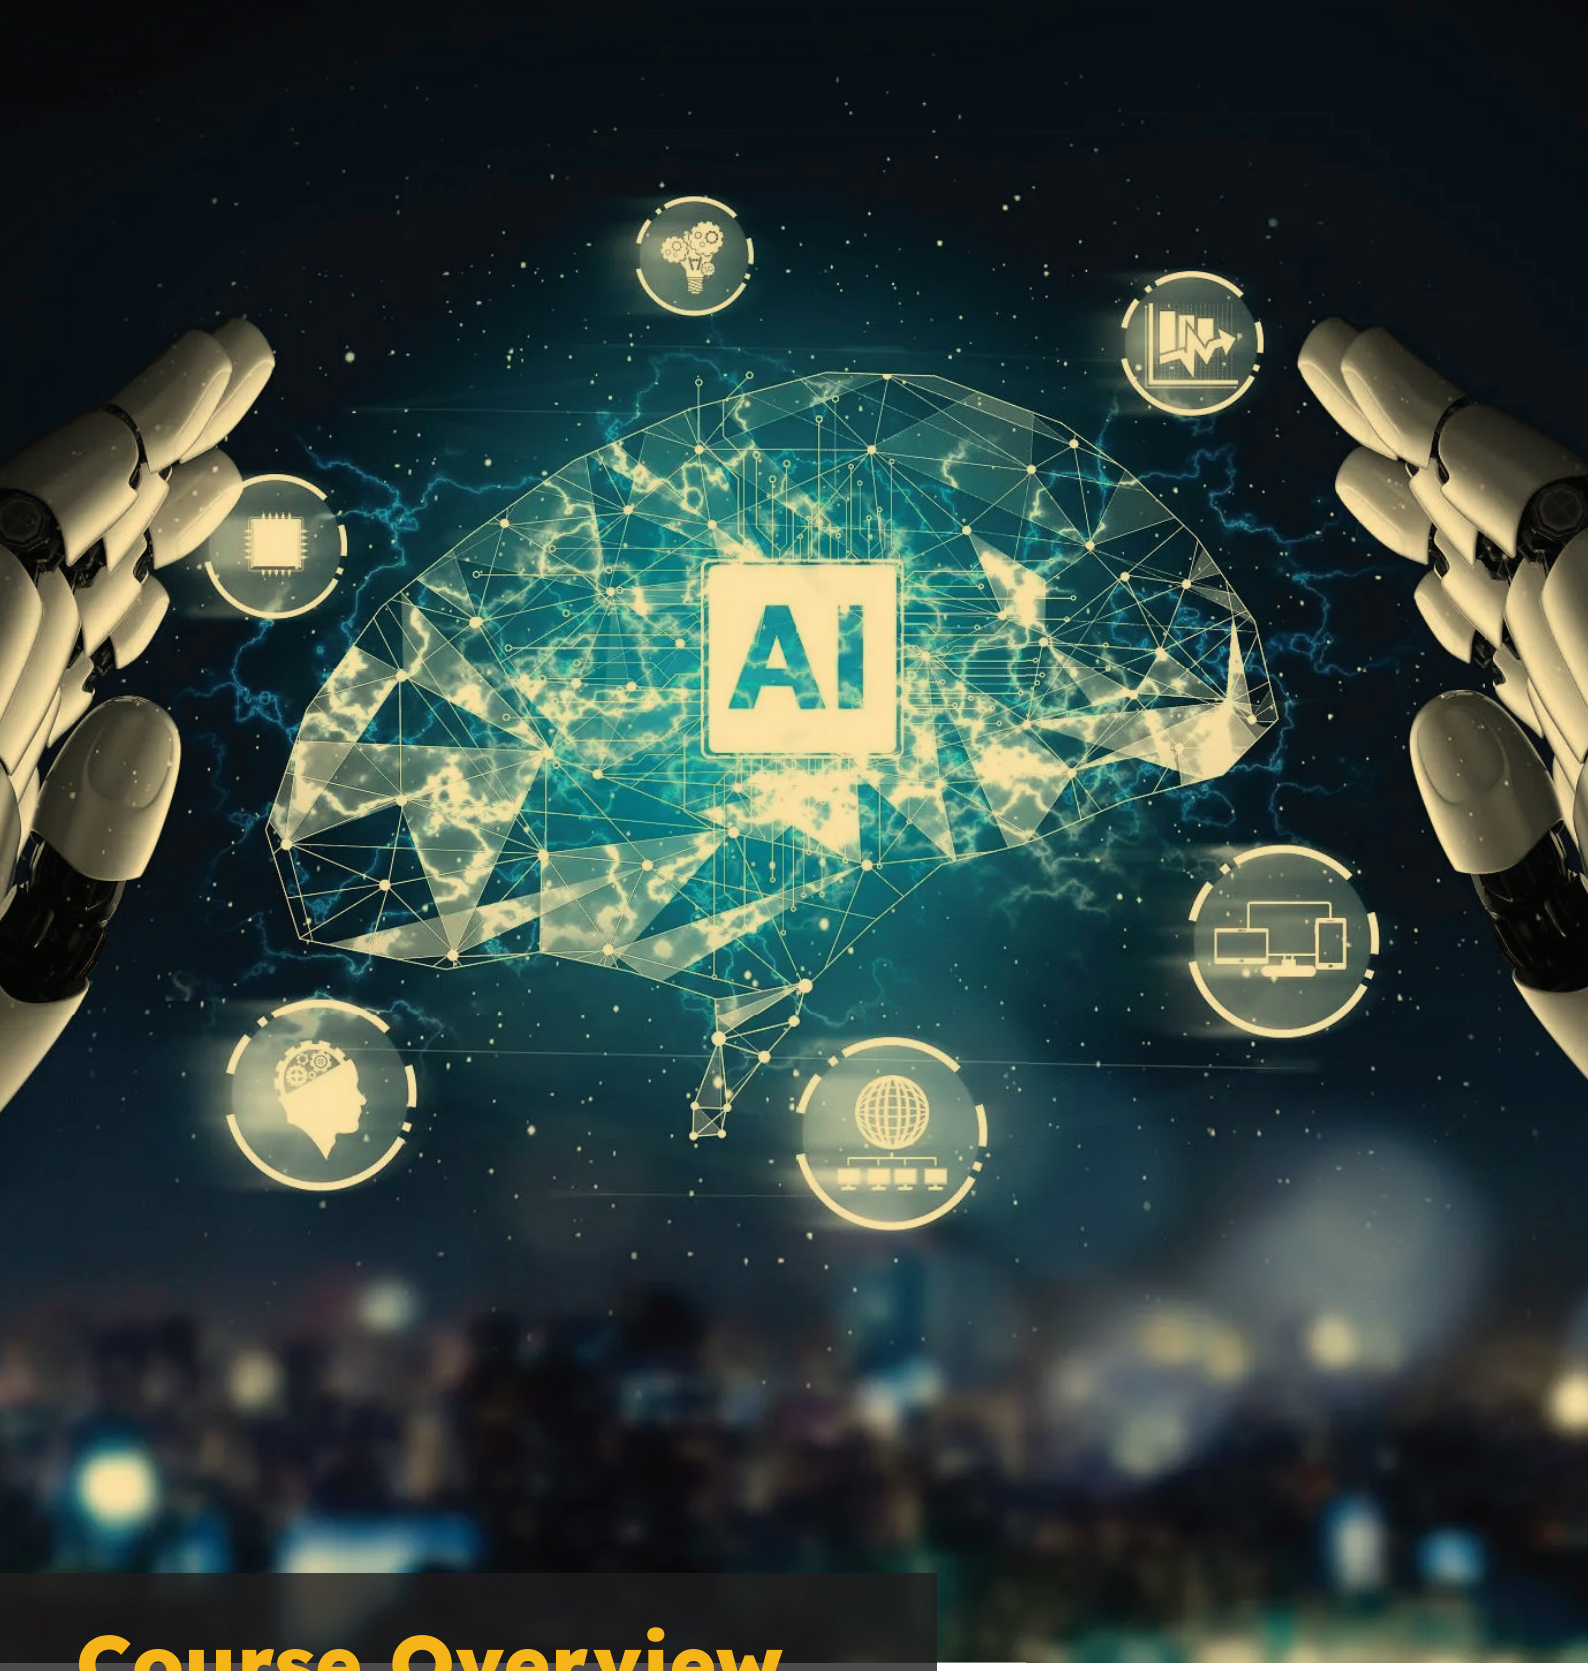

Projects: 5

Who Can Join

MBA, BBA, B.Com, Law, Finance, Audit, Commerce, and Management students can join this course.

No coding background is required. Good communication, documentation skills, and interest in business risk will be helpful.

Course Overview

This course teaches cybersecurity from a business and compliance point of view. Students will learn how companies identify cyber risks, prepare policies, manage vendor risks, respond to incidents, and protect sensitive data.

This is a practical cybersecurity path for students who do not want to start with penetration testing or programming. It focuses on workplace documentation, process thinking, and business responsibility.

Assignments

Students will complete assignments on risk registers, security policies, compliance checklists, vendor assessments, incident response documents, and privacy templates.

Quizzes

Quizzes will test understanding of cyber risk, governance terms, policy writing, compliance basics, and incident response.

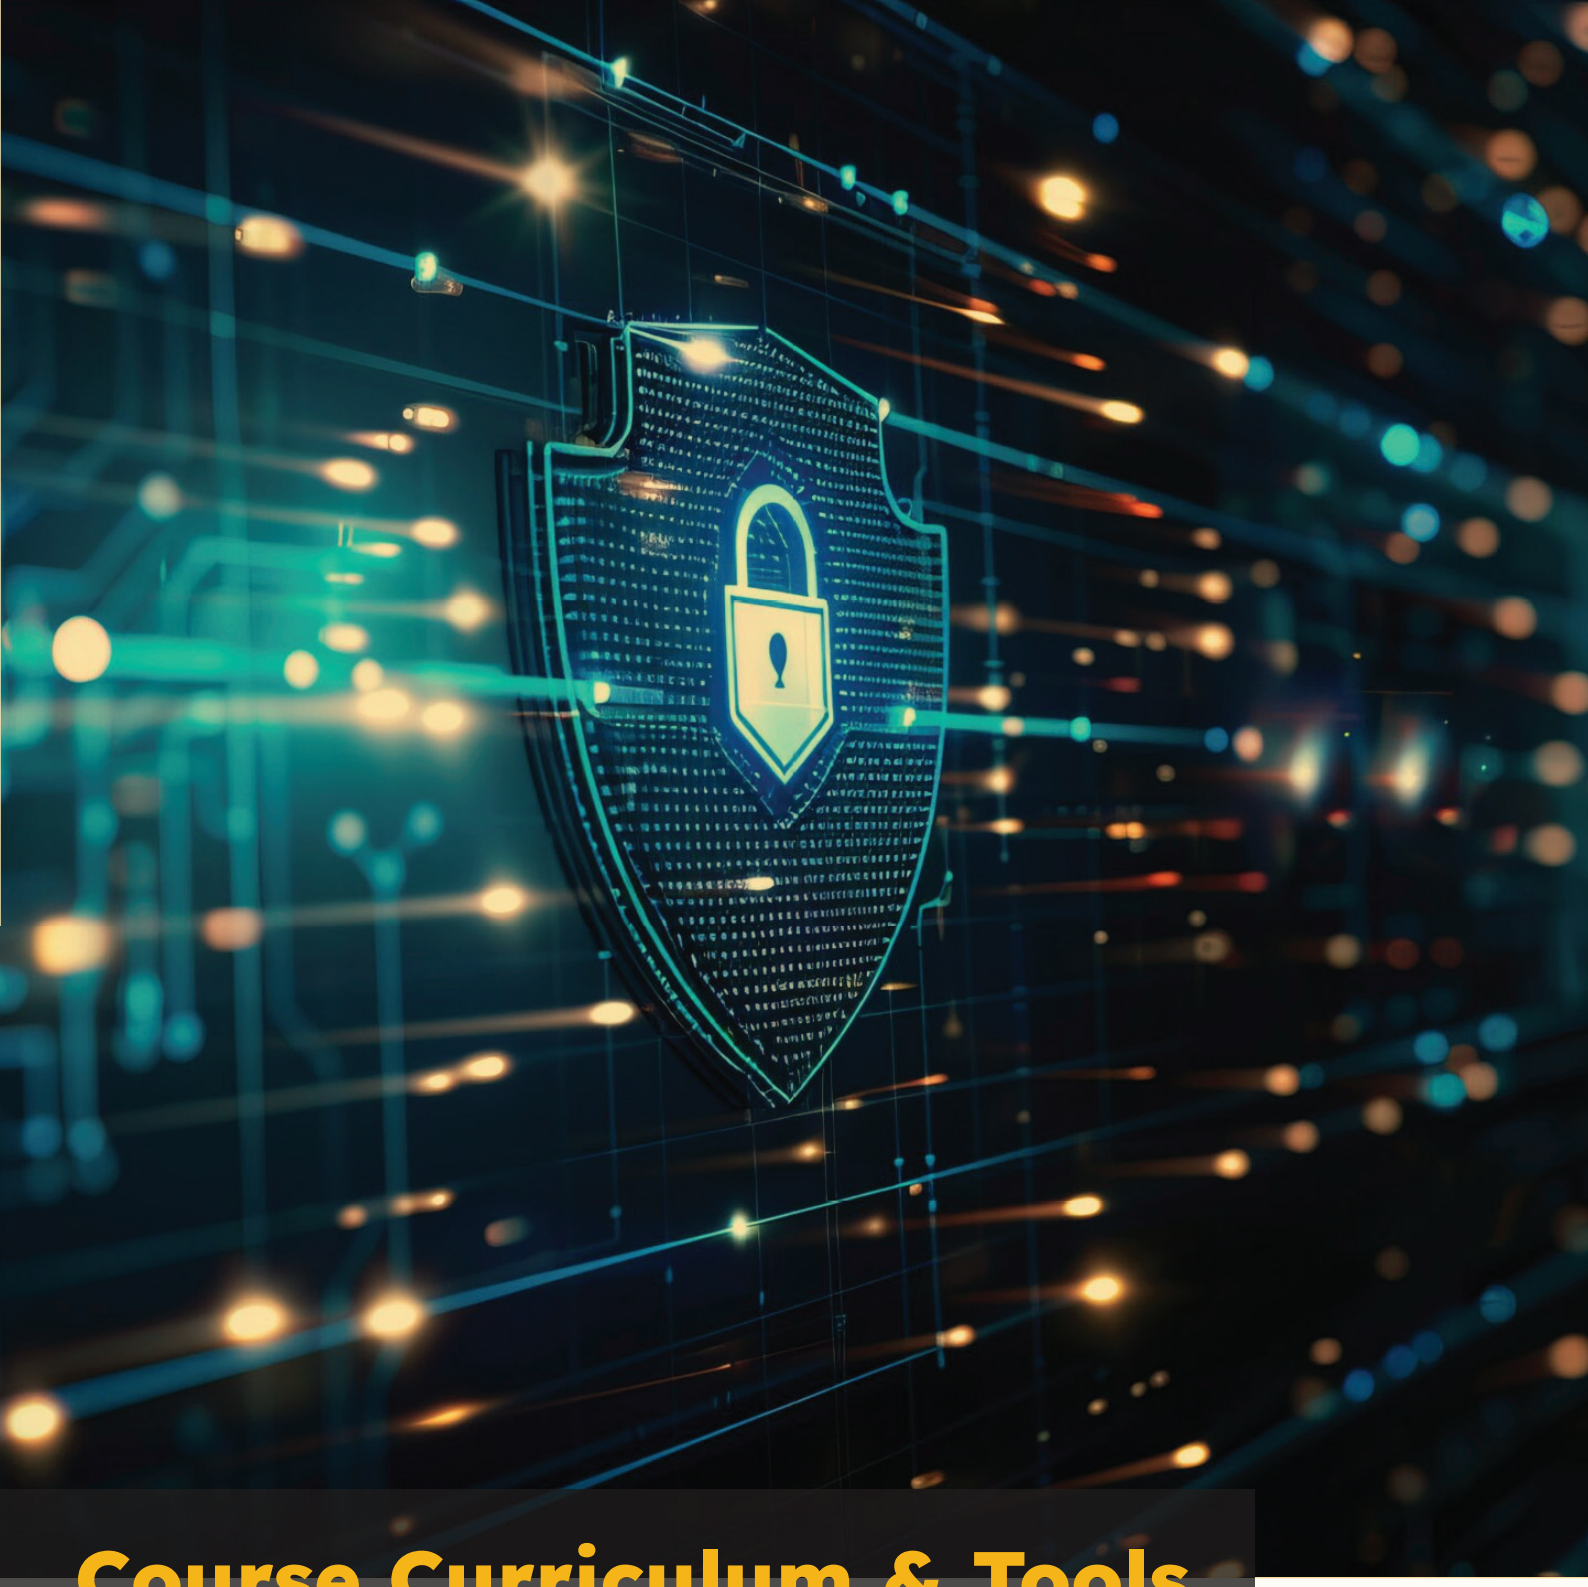

Live Sessions

Live sessions will include case studies, documentation practice, mock audit exercises, and GRC project reviews.

Projects

- Cyber risk register for a mock company
- Security policy writing project
- Vendor risk checklist
- Incident response documentation project
- Final capstone: Complete GRC pack for a business

Course Curriculum & Tools

Tools Covered:

- Risk register templates
- Policy templates
- Excel or Google Sheets
- ISO 27001 overview resources
- Incident response templates
- Privacy checklist templates
- AI tools for documentation support

Course Curriculum

✳ Cybersecurity Foundations for Business

- Students learn what cybersecurity means and how cyber attacks affect organizations.

✳ Governance and Security Policies

- Students learn how to prepare policies for password use, device use, access control, email safety, and data handling.

✳ Risk Management

- Students learn risk identification, risk rating, likelihood, impact, risk registers, and risk treatment plans.

✳ Compliance and Audit Basics

- Students learn the basics of ISO 27001, privacy principles, evidence collection, and audit preparation.

✳ Vendor and Third Party Risk

- Students learn how companies check vendor security, cloud risks, and third party data handling.

✳ Incident Response Documentation

- Students learn incident reporting, escalation matrix creation, timelines, and post incident review.

✳ Final Capstone Project

- Students prepare a complete GRC documentation pack for a mock organization.

What Benefits You Will Gain From the Course

Course Certificate

Students receive an Eduden certificate after completing assignments and the final project.

Practical Documentation Experience

Students learn the kind of documents and checklists used in real compliance and risk teams.

Portfolio Development

Students build a GRC portfolio with risk registers, policies, vendor checklists, and incident templates.

Ready for Interviews

Students learn how to explain cyber risk, compliance basics, data privacy, policy work, and business impact.

Career Path After This Course

This course is suitable for students who want cybersecurity careers without starting from coding or hacking.

Possible Career Roles

- GRC Analyst Trainee
- Cyber Risk Associate
- Compliance Assistant
- Audit Support Executive
- Privacy Operations Assistant
- Vendor Risk Analyst
- Information Security Coordinator

How It Helps in CV Building

Students can show risk registers, policy samples, compliance templates, and incident response documents as portfolio work. This is useful for entry level roles in risk, audit, compliance, and information security teams.

Next Learning Step

Students can continue into ISO 27001, Data Privacy, SOC Analyst Basics, Cybersecurity Awareness Management, or Digital Forensics Foundations.
