Get hired.

2026

GeoAI, GIS and Location Intelligence

Start Your Career in Data Science

About Eduden

Welcome to Eduden — where we've thrown boring education out the window and replaced it with hands-on learning, real-world skills, and a vibe that actually makes sense in 2026.

We're not your grandma's school (unless she's into coding, design, and memes). At Eduden, we're flipping the traditional classroom upside down. No whiteboards full of buzzwords. No endless theory. Just solid skills, taught by international trainers, that get you job-ready fast.

Whether you want to be a freelance graphic designer, a Python wizard, a networking pro, or a UI/UX boss, we've got your back. Our hybrid courses (online + offline) are packed with real projects, 100+ practical tasks, and mentorship that doesn't feel robotic. You'll be creating, building, and earning while still laughing at our bad jokes.

And the best part? We don't just teach you and send you off.

GeoAI, GIS and Location Intelligence

Opening Course Description

Geography is no longer only about maps in books. Today, maps, satellite images, location data, and spatial analysis are used in urban planning, disaster management, environment studies, logistics, public policy, and business location decisions.

This course by Eduden is designed for Geography, Geology, Environmental Science, Urban Planning, and related students who want to build modern career skills using GIS and location intelligence.

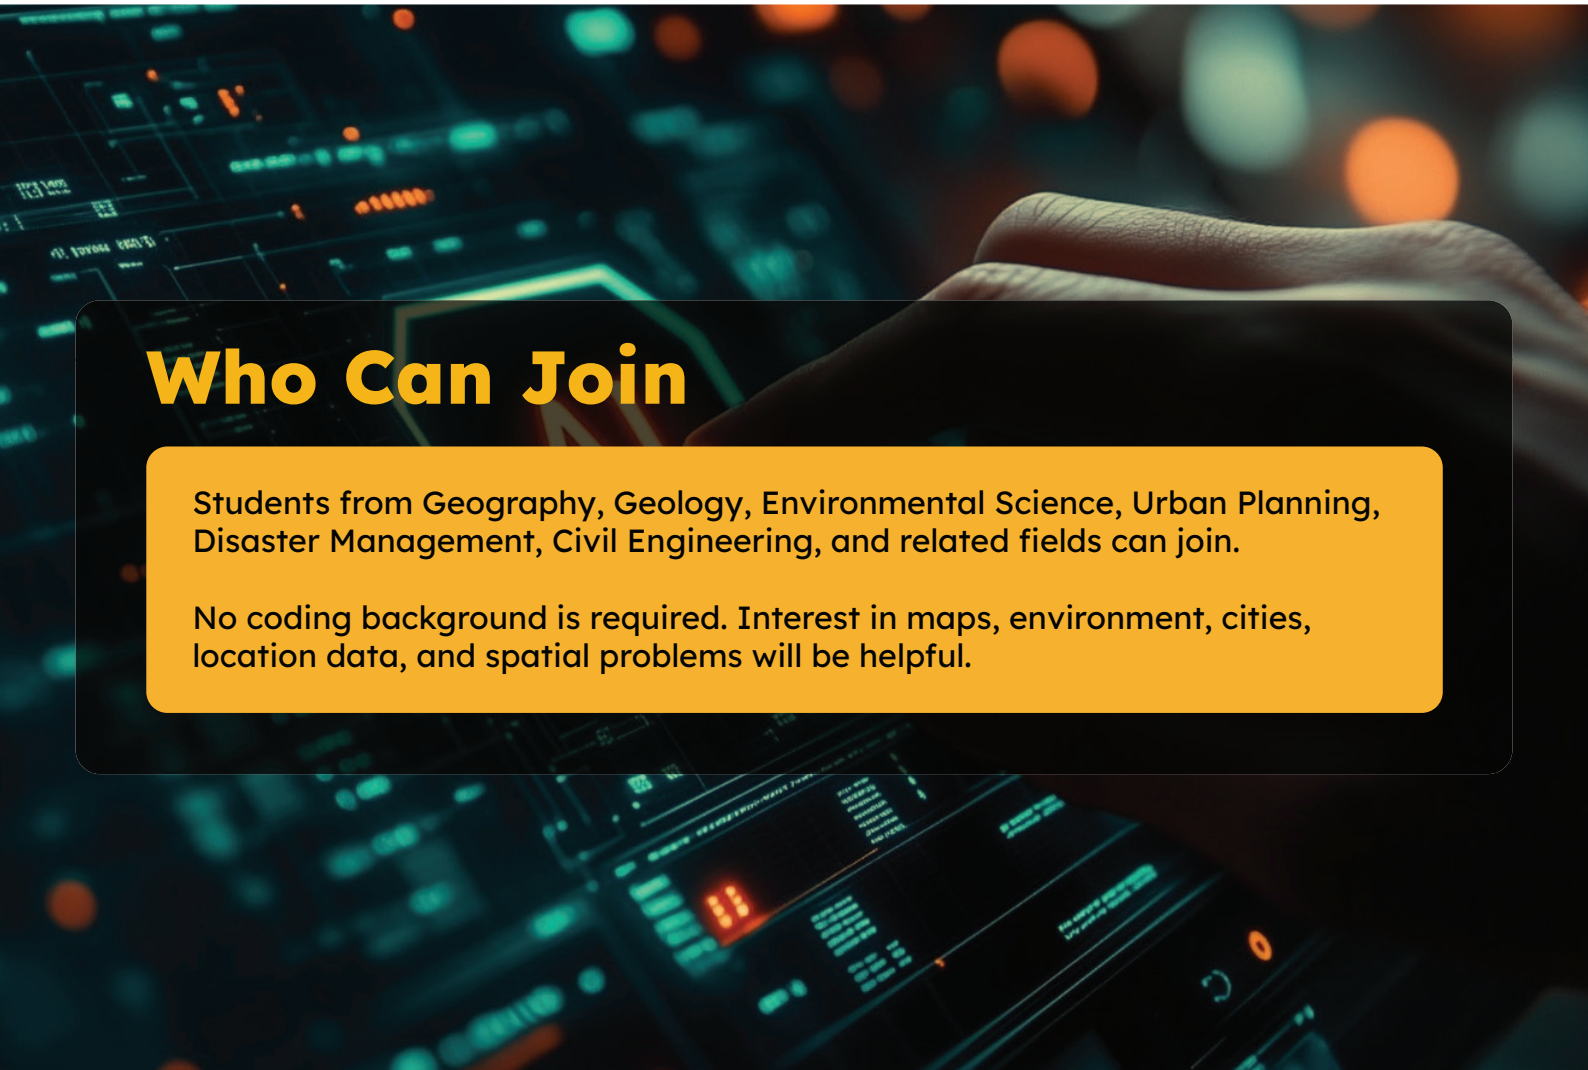

Suggested Category: AI and Tech for Non Technical Careers

Secondary Category: Data Science

Duration: 90 Days

Lecture: 50+

Projects: 5

Who Can Join

Students from Geography, Geology, Environmental Science, Urban Planning, Disaster Management, Civil Engineering, and related fields can join.

No coding background is required. Interest in maps, environment, cities, location data, and spatial problems will be helpful.

Course Overview

This course teaches students how to work with GIS tools, map layers, spatial data, satellite imagery basics, and location based analysis. Students will learn how to prepare maps, analyze regions, study land use, and create reports that can support real projects.

The course gives Geography students a strong career direction by connecting their subject with data and technology.

Assignments

Students will complete assignments on map creation, layer styling, spatial queries, remote sensing interpretation, and location analysis.

Quizzes

Quizzes will test understanding of GIS concepts, map layers, coordinate systems, spatial data types, and analysis methods.

Live Sessions

Live sessions will include QGIS demonstrations, map creation labs, dataset practice, and project feedback.

Projects

- Basic GIS map creation
- Population or facility mapping project
- Land use interpretation project
- Flood risk or site suitability analysis
- Final capstone: Location intelligence project with report

Course Curriculum & Tools

Tools Covered:

- QGIS
- Google Earth
- Excel
- Google Earth Engine basics
- Public geospatial datasets
- Satellite imagery sources
- Canva or PowerPoint
- AI tools for report writing support

Course Curriculum

✳ GIS Foundations

- Students learn what GIS is, how maps are created, and how spatial data is used for decision making.

✳ QGIS Practical Training

- Students learn how to use QGIS, create layers, work with shapefiles, style maps, and label features.

✳ Spatial Data Analysis

- Students learn buffer analysis, overlay analysis, distance analysis, proximity analysis, and basic spatial patterns.

✳ Remote Sensing Basics

- Students learn satellite imagery, land use and land cover, vegetation index basics, and change detection.

✳ Location Intelligence

- Students learn how location data is used in business, city planning, transport, disaster risk, and environment projects.

✳ Final Capstone Project

- Students complete a practical location based project such as flood risk mapping, urban growth study, land use mapping, or site suitability analysis.

What Benefits You Will Gain From the Course

Course Certificate

Students receive an Eduden certificate after completing assignments and the final project

Practical Map Based Projects

Students work on real map based tasks that connect directly with their subject area.

Portfolio Development

Students build a GIS portfolio with maps, project files, spatial reports, and final presentation material.

Ready for Interviews

Students learn how to explain GIS projects, spatial analysis, map outputs, and location based findings.

Career Path After This Course

This course gives Geography and Environmental Science students a modern career path in GIS and spatial data.

Possible Career Roles

- GIS Analyst Trainee
- Spatial Data Assistant
- Urban Planning Assistant
- Environmental Data Assistant
- Research Assistant
- Disaster Mapping Assistant
- Location Intelligence Assistant

How It Helps in CV Building

Students can add GIS maps, QGIS projects, spatial reports, and location analysis projects to their CV. This gives them a practical edge over students with only theoretical geography knowledge.

Next Learning Step

Students can continue into Advanced GIS, Remote Sensing, Environmental Data Analytics, Urban Planning Analytics, or Data Analytics.
