UX/UI Design for Business and Product Careers with Figma

About Eduden

Welcome to Eduden — where we've thrown boring education out the window and replaced it with hands-on learning, real-world skills, and a vibe that actually makes sense in 2026.

We're not your grandma's school (unless she's into coding, design, and memes). At Eduden, we're flipping the traditional classroom upside down. No whiteboards full of buzzwords. No endless theory. Just solid skills, taught by international trainers, that get you job-ready fast.

Whether you want to be a freelance graphic designer, a Python wizard, a networking pro, or a UI/UX boss, we've got your back. Our hybrid courses (online + offline) are packed with real projects, 100+ practical tasks, and mentorship that doesn't feel robotic. You'll be creating, building, and earning while still laughing at our bad jokes.

And the best part? We don't just teach you and send you off.

UX/UI Design for Business and Product Careers with Figma

Opening Course Description

Every product people love is built on good design. Apps, websites, payment screens, food delivery flows, banking dashboards, and e-commerce checkouts all succeed or fail based on how easy and enjoyable they are to use. Companies today treat user experience as a business priority, not just a creative task.

This course by Eduden is designed for students from MBA, BBA, Commerce, Economics, Arts, and other non design backgrounds who want to understand how digital products are designed and improved. You will learn UX thinking, UI fundamentals, and Figma in a practical classroom environment and build design projects that can be shown in interviews, internships, and placements.

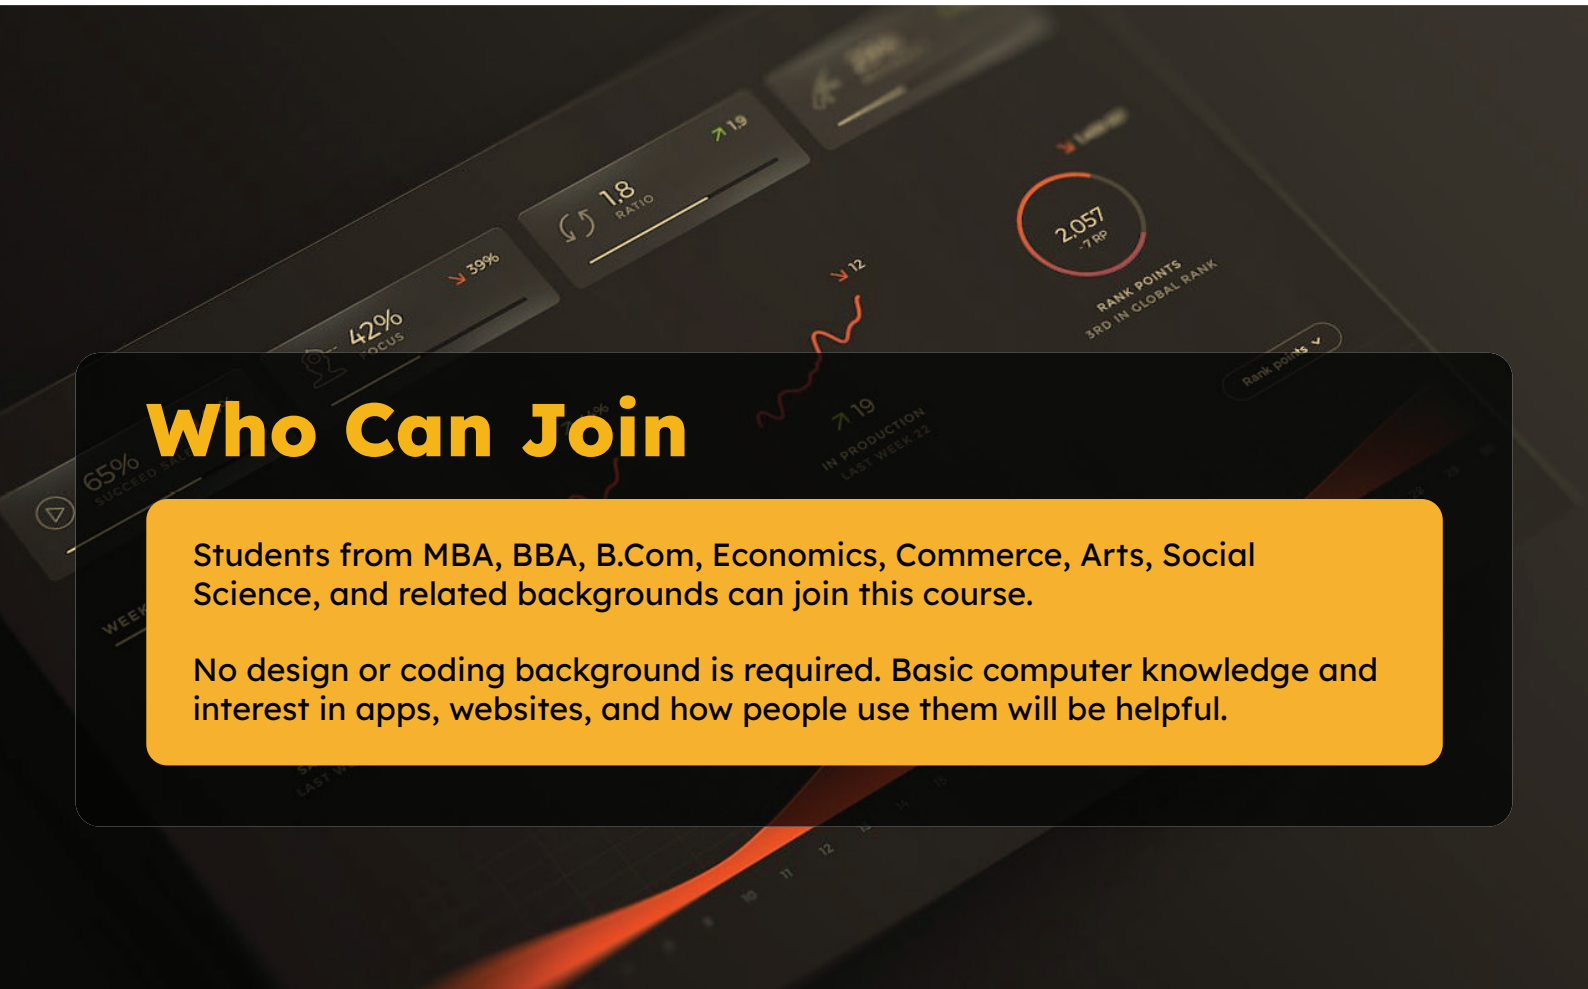

Suggested Category: AI and Tech for Non Technical Careers

Secondary Category: Design and Product

Duration: 90 Days

Lecture: 50+

Projects: 6

Who Can Join

Students from MBA, BBA, B.Com, Economics, Commerce, Arts, Social Science, and related backgrounds can join this course.

No design or coding background is required. Basic computer knowledge and interest in apps, websites, and how people use them will be helpful.

Course Overview

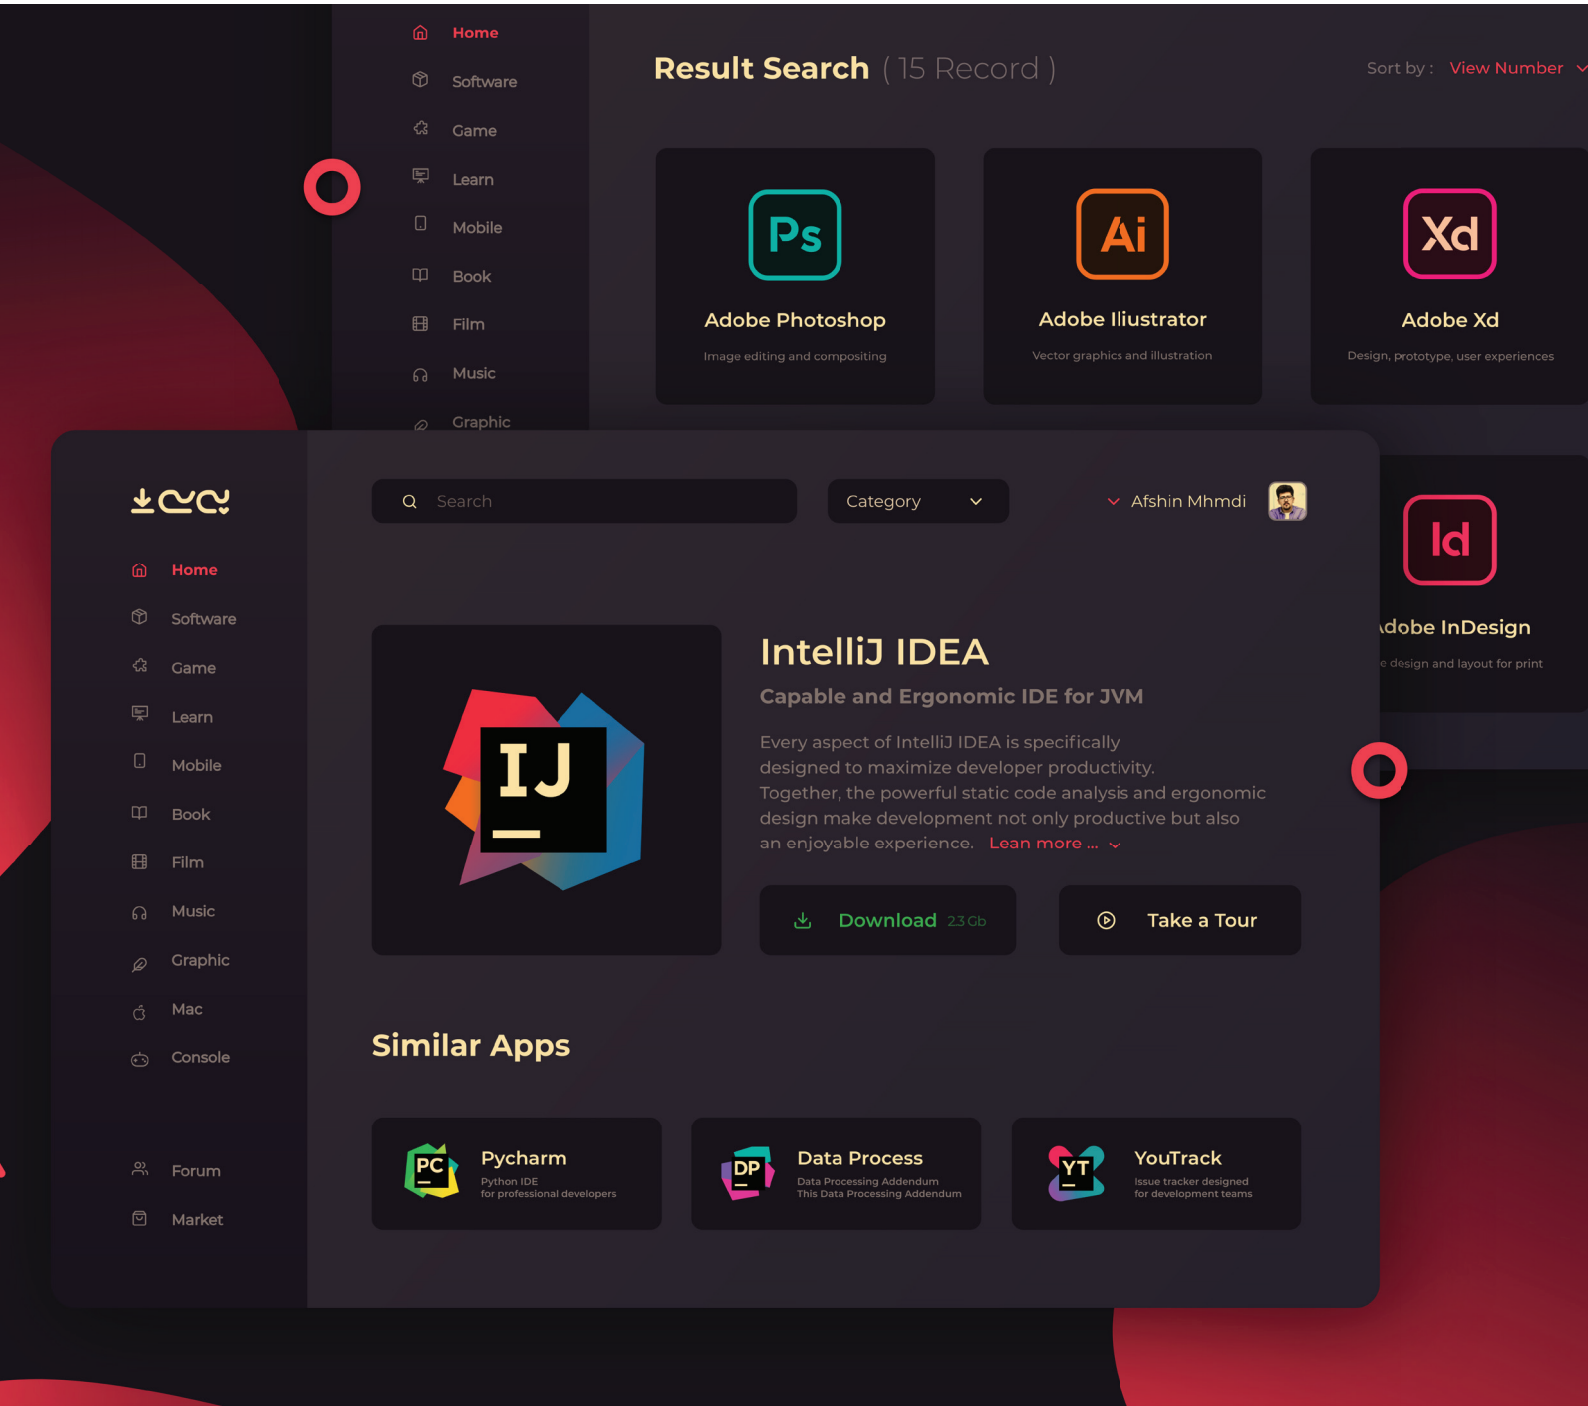

This course focuses on practical UX/UI skills that are useful in product, marketing, consulting, and startup roles. Students will learn how to research users, map customer journeys, apply design thinking, create wireframes, design clean screens in Figma, build clickable prototypes, and test designs with real users.

The goal is not to make students professional graphic artists. The goal is to help them think like a user, communicate design decisions in business language, and confidently contribute to product and digital teams. By the end of the course, students will have wireframes, Figma designs, prototypes, and case study write-ups that can add real value to their CV.

Learning Objectives

By the end of this course, students will be able to:

Understand what UX and UI mean and why they matter to business and product strategy Conduct basic user research through interviews, surveys, and observation Map customer journeys and identify pain points and opportunities Apply the design thinking process to real business problems Create wireframes and clickable prototypes in Figma Apply visual hierarchy, typography, color, spacing, and layout principles Write clear and simple UX copy for screens and flows Run basic usability tests and turn feedback into design improvements Present design work with business reasoning during interviews and reviews

Assignments

Students will complete assignments on user interviews, journey mapping, wireframe sketching, Figma screen design, UX writing, prototype building, and usability test reporting.

Quizzes

Short quizzes will test understanding of UX terms, design thinking stages, UI principles, typography and color basics, prototyping concepts, and usability testing methods.

Live Sessions

Live classroom sessions will include Figma demonstrations, guided design practice, doubt clearing, design critiques, case study discussions, and project reviews.

Projects

- Customer journey map for a real Indian app or service
- Mobile app redesign wireframes for a commonly used app
- Landing page UI design in Figma
- Clickable prototype for a new app idea
- Usability test report with findings and recommendations
- Final capstone: complete app or website design with case study presentation

Course Curriculum & Tools

Tools Covered:

Course Curriculum

✳ Introduction to UX/UI Design

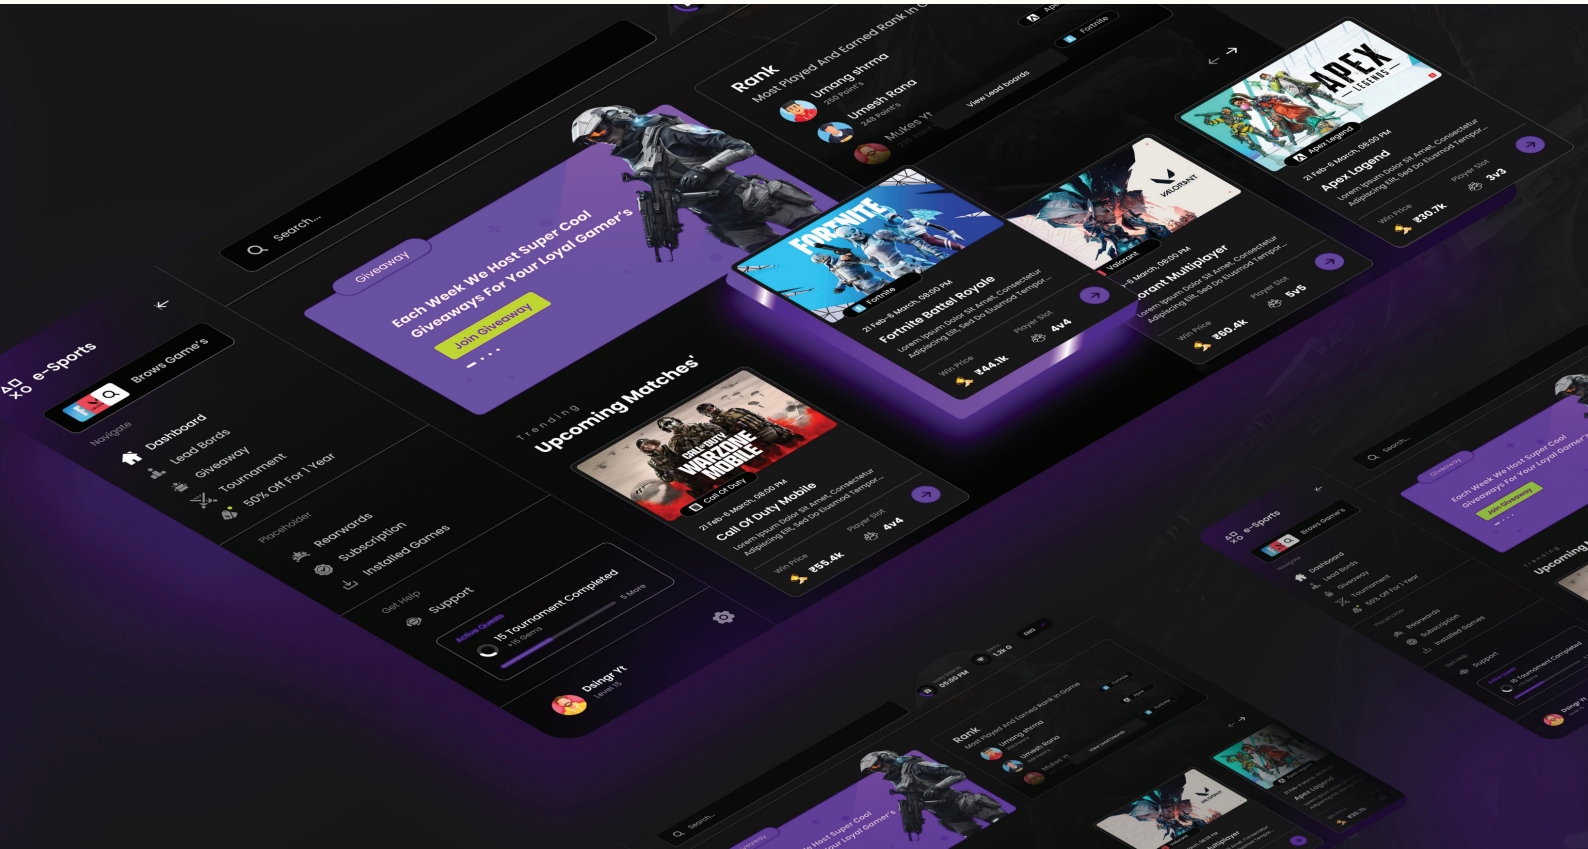

- Students learn what UX and UI mean, how they are different, and how design shapes everyday digital products. Practical activity: analyse one favourite app and one frustrating app and list what works and what fails.

✳ UX/UI in Business and Product Strategy

- Students learn how good design increases sales, retention, trust, and brand value, and how companies measure the business impact of design. Practical activity: compare two competing apps and connect design differences to business outcomes.

✳ User Research Basics

- Students learn how to understand users through interviews, surveys, observation, and simple user personas. Practical activity: conduct three short user interviews and build one user persona.

⁕ Customer Journey Mapping

- Students learn how to map the full customer journey across touchpoints and identify pain points, emotions, and opportunities. Practical activity: create a journey map for ordering food, booking a ticket, or opening a bank account.

⁕ Design Thinking

- Students learn the five stages of design thinking: empathise, define, ideate, prototype, and test, and apply them to a business problem. Practical activity: run a mini design thinking sprint in groups on a real campus or local business problem.

⁕ Wireframing

- Students learn how to plan screens using low fidelity sketches and digital wireframes before adding visual design. Practical activity: sketch paper wireframes for a mobile app and rebuild them as digital wireframes.

⁕ UI Fundamentals and Visual Hierarchy

- Students learn the building blocks of interfaces including buttons, cards, forms, navigation, and how visual hierarchy guides user attention. Practical activity: redesign a cluttered screen to improve clarity and focus.

⁕ Typography, Color, Spacing, and Layout

- Students learn how to choose fonts, build simple color palettes, use white space, and arrange layouts using grids and alignment. Practical activity: create one well-designed screen using proper type scale, spacing, and a three-color palette.

⁕ Figma Basics

- Students learn frames, shapes, text, components, auto layout basics, and how to organise design files professionally. Practical activity: recreate a popular app screen in Figma step by step.

⁕ Prototyping in Figma

- Students learn how to connect screens, add interactions, and create clickable prototypes that feel like real apps. Practical activity: build a clickable prototype of a three to five screen user flow.

⁕ Usability Testing

- Students learn how to plan simple usability tests, observe users, record findings, and improve designs based on feedback. Practical activity: test a prototype with three users and write a short findings report.

⁕ Product Experience and Customer Experience

- Students learn how UX connects to overall product experience and customer experience, including onboarding, support, and retention moments. Practical activity: map the end to end experience of a subscription or delivery service.

⁕ UX Writing Basics

- Students learn how to write clear button labels, error messages, onboarding text, and notifications in simple user friendly language. Practical activity: rewrite confusing screens from real apps with better UX copy.

⁕ Design Systems Introduction

- Students learn what design systems are, why companies like Google and Airbnb use them, and how reusable components keep products consistent. Practical activity: create a mini style guide with colors, typography, and basic components in Figma.

⁕ Case Studies from Business, Apps, and Websites

- Students study real design case studies from Indian and global products including payment apps, e-commerce, food delivery, and SaaS tools. Practical activity: present one case study analysing what the company changed and why it worked.

✳ Final Capstone Project

- Students design a complete app or website from research to prototype and present it as a professional case study with business reasoning.

What Benefits You Will Gain From the Course

Course Certificate

Students who complete the assignments and final project will receive an Eduden certificate of completion.

Practical Project Experience

Students will work on real design tasks similar to what product and design teams do in companies, from research to final prototype.

Portfolio Development

Students will build a portfolio with journey maps, wireframes, Figma designs, clickable prototypes, and case study presentations.

Ready for Interviews

Students will be able to walk interviewers through their design projects, explain their decisions in business language, and demonstrate live prototypes.

Expected Outcomes

By the end of the course, students will be comfortable using Figma, confident in explaining UX concepts, capable of designing and testing simple digital products, and ready to work with product, design, and marketing teams.

Career Path After This Course

This course helps students apply for roles where product understanding, user focus, and design communication are valued.

Possible Career Roles

UX/UI Design Intern Product Management Trainee Product Analyst UX Researcher Trainee Business Analyst with Product Focus Digital Marketing Executive Customer Experience Associate UX Writer Trainee Design Operations Assistant

Career Relevance for Management Students

Management students who understand UX/UI stand out in product management, consulting, marketing, and startup roles. They can speak the language of both business and design teams, evaluate digital products critically, and contribute to product decisions from day one. Recruiters increasingly prefer management candidates who can show real design thinking work rather than only classroom theory.

How It Helps in CV Building

Students can add journey maps, Figma projects, prototypes, usability reports, and the final capstone case study to their CV and LinkedIn. This gives recruiters proof that the student can work on real digital products and not just speak about user experience theoretically.

Next Learning Step

Students can continue into Product Management, AI for Business Strategy, Business Analytics and MIS Reporting, or Digital Marketing and Growth.
