Get hired.

Start Your Career in Artificial Intelligence

2026 Artificial Intelligence Course With Eduden

About Eduden

Welcome to Eduden — where we've thrown boring education out the window and replaced it with hands-on learning, real-world skills, and a vibe that actually makes sense in 2026.

We're not your grandma's school (unless she's into coding, design, and memes). At Eduden, we're flipping the traditional classroom upside down. No whiteboards full of buzzwords. No endless theory. Just solid skills, taught by international trainers, that get you job-ready fast.

Whether you want to be a freelance graphic designer, a Python wizard, a networking pro, or a UI/UX boss, we've got your back. Our hybrid courses (online + offline) are packed with real projects, 100+ practical tasks, and mentorship that doesn't feel robotic. You'll be creating, building, and earning while still laughing at our bad jokes.

And the best part? We don't just teach you and send you off.

Deep Learning & Neural Networks with TensorFlow & Keras – 60 Days Hands-On Training

Learn How to Build Powerful AI Models That Think Like a Human Brain – Work on Image, Text, and Prediction Problems Using Neural Networks

This course is for aspiring AI engineers, ML developers, and data science learners who want to level up their skills by mastering deep learning, the driving force behind innovations like ChatGPT, self-driving cars, facial recognition, and more.
You'll go beyond basic ML and dive deep into neural networks, TensorFlow, and Keras, building powerful models from scratch and training them on real-world datasets.

Duration: 60 Days

Format: Hybrid (Online & Offline at Eduden, Kolkata)

Level: Intermediate to Advanced

Track: Deep Learning, Neural Networks, Advanced ML

Tools Covered: TensorFlow, Keras, Python, NumPy, Matplotlib, Google Colab

Course Objective

To provide a solid foundation in neural network architectures, deep learning workflows, and real-world AI applications using TensorFlow and Keras — all taught with hands-on projects, not just theory.

Who Can Join

- Learners with basic ML or Python experience
- Data science and ML graduates ready for next level
- Developers exploring computer vision or NLP
- Professionals aiming for AI Engineer roles or research

Course Curriculum

Module 1

Introduction to Deep Learning

- What is deep learning & why does it matter?
- Neural networks vs machine learning
- Real-world applications: NLP, CV, fraud detection, more
- Hands-on: Visualize a neural net's structure

Module 2

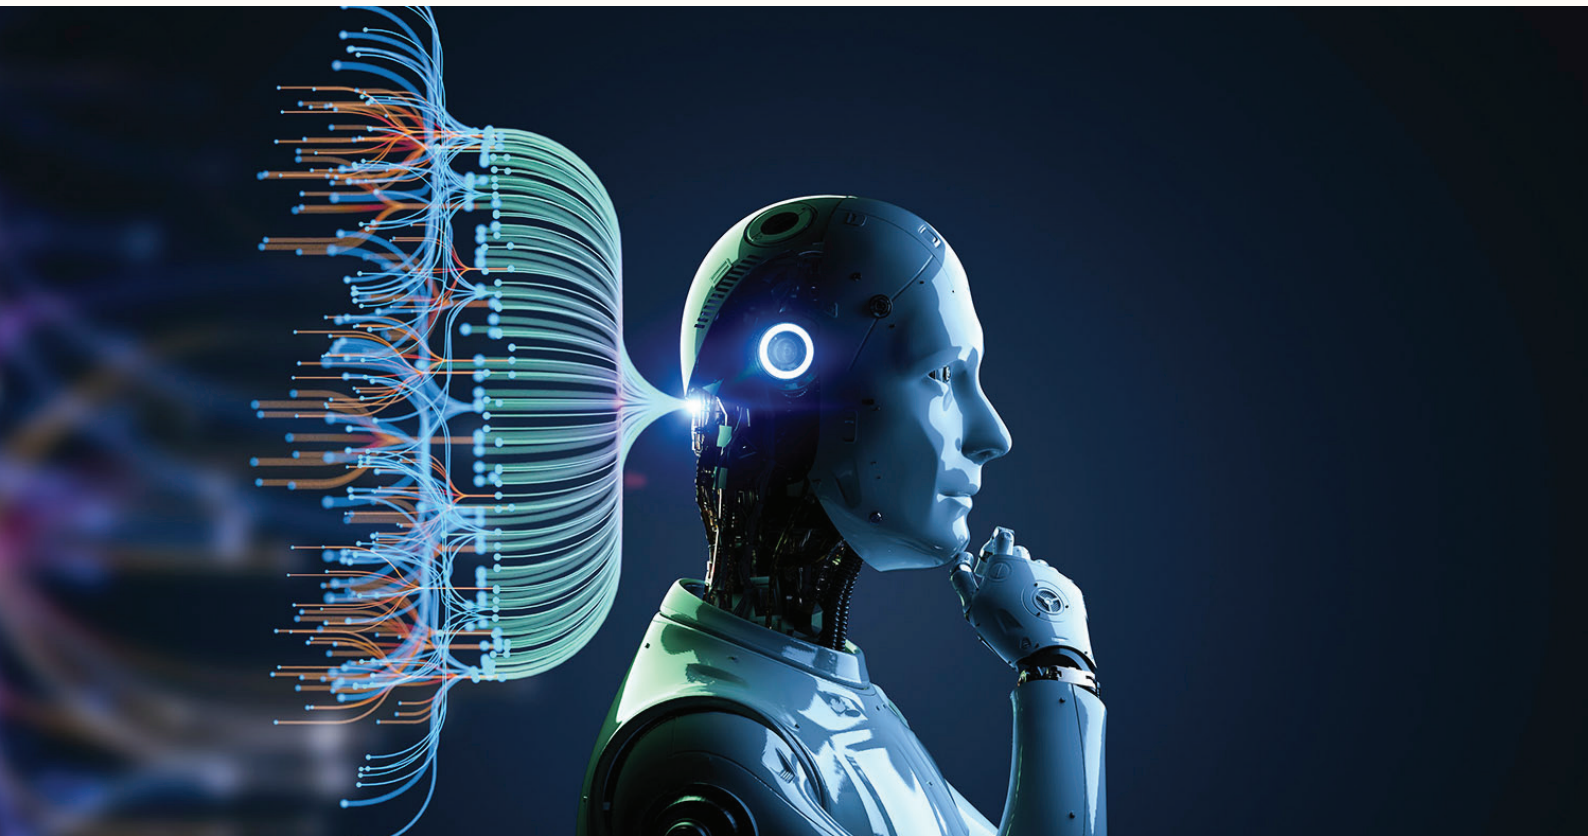

Feedforward Neural Networks (FNNs)

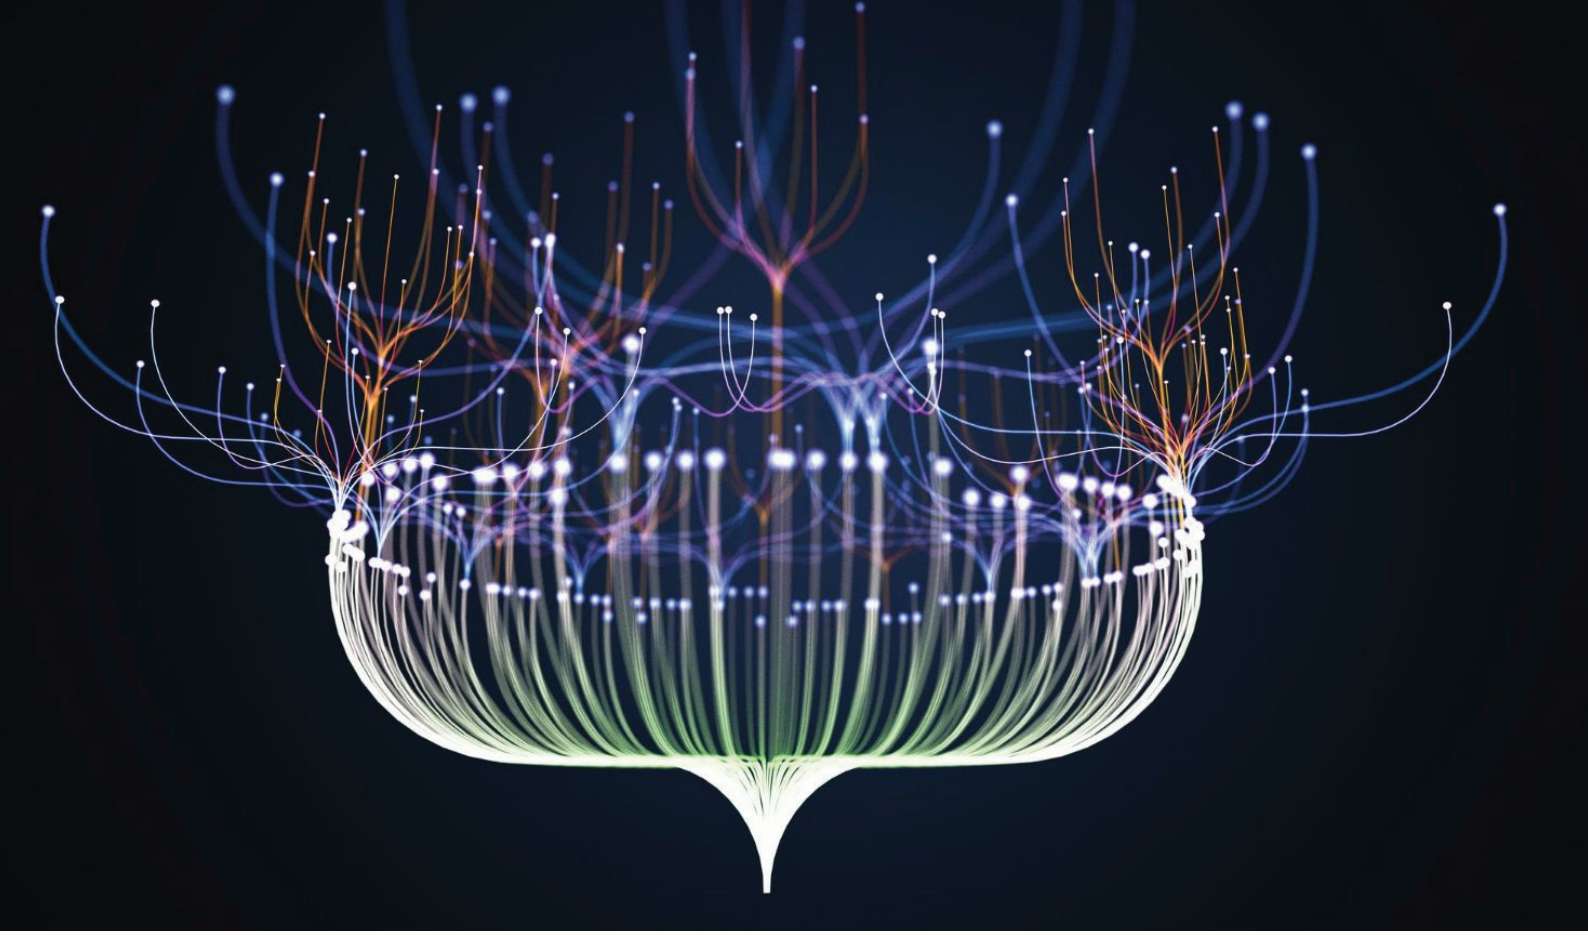

- Perceptrons, activation functions
- Forward pass, backward pass, gradient descent
- Overfitting, regularization, dropout
- Hands-on: Build your first neural net from scratch

Module 3

TensorFlow & Keras Fundamentals

- Tensors, layers, loss functions, optimizers
- Functional API vs Sequential models
- Model compiling, training, evaluation
- Hands-on: Build a classifier for handwritten digits (MNIST)

Module 4

Convolutional Neural Networks (CNNs)

- What is convolution and how it works
- Filters, pooling layers, flattening
- Image classification and object detection basics
- Hands-on: Train a CNN to classify real-world image sets

Module 5

Recurrent Neural Networks (RNNs) + LSTM/GRU

- Sequence modeling, time series forecasting
- RNN limitations LSTM & GRU solutions
- Hands-on: Predict stock prices or generate text with LSTM

Module 6

Transfer Learning + Fine-Tuning

- Pre-trained models (VGG, ResNet, MobileNet)
- Feature extraction, retraining, freezing layers
- Hands-on: Build an image classifier using a pre-trained model in 15 minutes

Module 7

Final Capstone Project

Choose one domain-based deep learning project:

- Medical Image Classification (e.g. X-ray analysis)
- Sentiment Analysis with LSTM
- Object Detection for Smart Cameras
- Product Recommendation System

Submit: Notebook + GitHub Repo + PPT for project presentation

Certification

- Eduden Certificate in Deep Learning with TensorFlow/Keras
- Based on project performance and model accuracy
- GitHub + project support for job portfolios

Career Roles You'll Be Ready For

- AI Engineer / Deep Learning Developer
- Computer Vision Specialist
- NLP Engineer (entry-level)
- ML Engineer (Advanced Track)
- Data Scientist (with DL projects)

Course Highlights

- 60 Days of Deep Learning Training from Scratch
- Best Deep Learning Course in India with TensorFlow
- Hands-on Practice with CNNs, RNNs, LSTMs, and Transfer Learning
- Certificate from Eduden – India's Leading AI Training Institute
- Hybrid Format – Online or Offline at Eduden, Kolkata
- Capstone Project + GitHub Portfolio
- Prepares You for AI Engineering Interviews
- Ideal for ML Pros, Final-Year Students, and Working Devs
