2026 Cyber Security Course With Eduden

Start Your Career in Cyber Security

About Eduden

Welcome to Eduden — where we've thrown boring education out the window and replaced it with hands-on learning, real-world skills, and a vibe that actually makes sense in 2026.

We're not your grandma's school (unless she's into coding, design, and memes). At Eduden, we're flipping the traditional classroom upside down. No whiteboards full of buzzwords. No endless theory. Just solid skills, taught by international trainers, that get you job-ready fast.

Whether you want to be a freelance graphic designer, a Python wizard, a networking pro, or a UI/UX boss, we've got your back. Our hybrid courses (online + offline) are packed with real projects, 100+ practical tasks, and mentorship that doesn't feel robotic. You'll be creating, building, and earning while still laughing at our bad jokes.

And the best part? We don't just teach you and send you off.

Android Application Penetration Testing – Basics (30 Days Hands -On Course)

Course Objective

Ever wondered how hackers break into mobile apps — and how to stop them?

This 30-day beginner-friendly Android Application Penetration Testing course by Eduden is your entry into the world of mobile app security and ethical hacking. You'll learn how Android apps can be reverse-engineered, how data leaks happen, and how insecure coding practices can open the door to attacks.

If you're looking for the best beginner Android hacking course in India, especially in Kolkata or West Bengal, this course is made for you. No advanced coding or reverse engineering required — we start simple, and keep it hands-on from day one.

Duration 30 Days	Lectures 24	Projects 3

Eligibility

To join this course, you should have:

- Any basic cybersecurity certification (e.g. CEH, Security+, eJPT) OR
- Relevant experience in cybersecurity, IT support, or app development

Not sure where to start with mobile app security?

- Join our free Android hacking seminar and get an inside look at how mobile apps are tested in the real world.

Course Overview

This 30-day program is designed to introduce students to the foundations of Android mobile app penetration testing, using simple tools and real-world apps. You'll learn how to analyze APK files, inspect insecure coding practices, capture data in transit, and test Android apps for OWASP Mobile Top 10 vulnerabilities.

You'll also learn how to use tools like MobSF, jadx, Burp Suite, and Android emulators — all inside a safe, fully guided lab environment. Whether you're a student, entry-level analyst, or a developer curious about mobile security, this is one of the most practical Android security courses in India right now.

Assignments

APK decompilation tasks, mobile traffic interception, and insecure storage analysis — all with walkthroughs and mentorship.

Quizzes

Quick checkpoints at the end of every module to reinforce learning, focused on OWASP Mobile concepts and tool usage.

Live Sessions

Weekly lab demos, tool walkthroughs, and Q&A sessions with mobile security practitioners.

Projects

You'll complete 3 key hands-on mobile app assessments:

- Analyze an APK and extract insecure data
- Intercept mobile app traffic using Burp Suite
- Final Project: Identify and report 3 OWASP Mobile vulnerabilities in a test app

Course Curriculum & Tools

Main Tools You'll Learn:

Curriculum Breakdown

⁂ Android Architecture & Lab Setup

- Understanding APK files and Android app structure
- Setting up Android emulator and rooted environment
- Installing tools: MobSF, Burp Suite, jadx

⁂ Static Analysis of APKs

- Decompiling APKs and exploring source code
- Finding hardcoded credentials, insecure URLs, logging flaws
- Hands-on: Analyze a sample messaging app

✳ Dynamic Analysis & Network Traffic Inspection

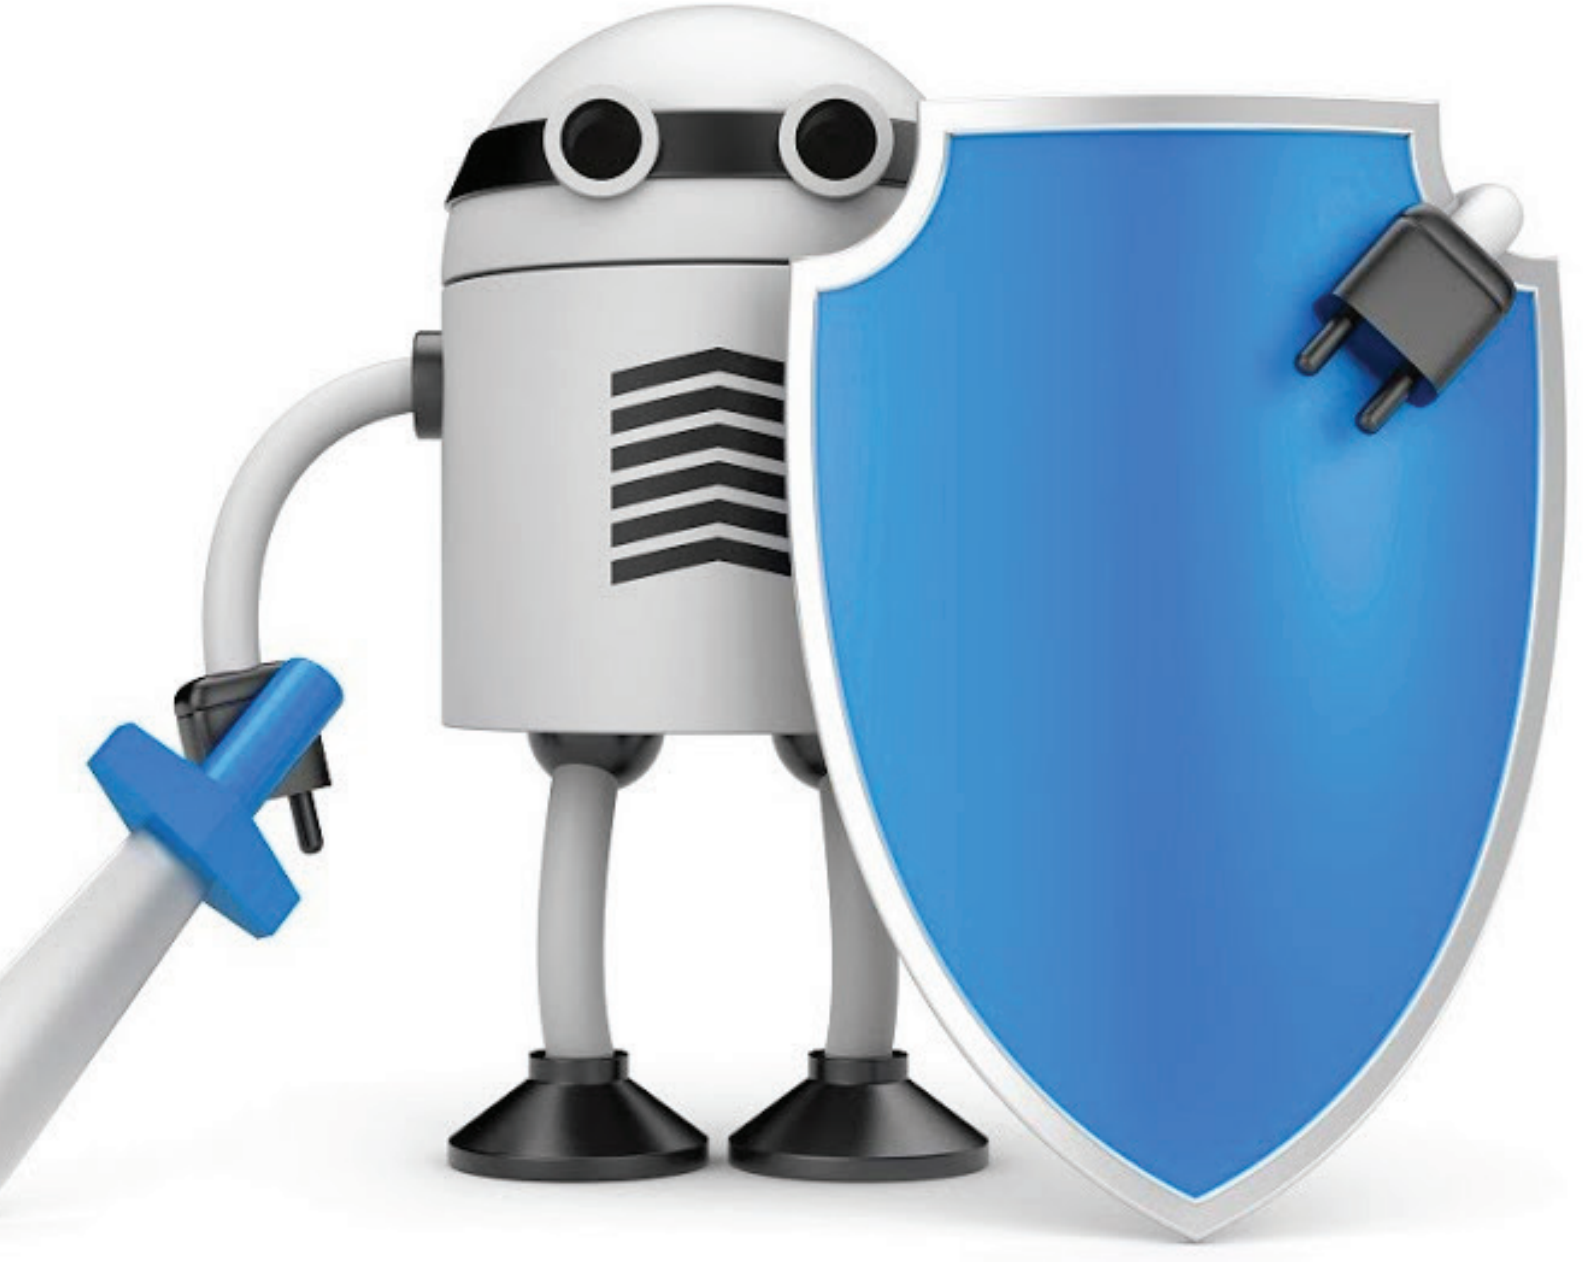

- Capturing app traffic with Burp Suite
- Identifying weak SSL configurations
- Testing login flows and session tokens
- Hands-on: Capture and analyze insecure app communication

✳ Common Mobile Vulnerabilities (OWASP Mobile Top 10 - Lite)

- Insecure data storage
- Improper platform usage
- Insecure communication
- Hands-on: Find and report a critical flaw in a lab app

✳ Final Assessment & Reporting Basics

- Documenting mobile app vulnerabilities
- Writing a basic security report
- Bonus: Steps to transition into advanced mobile testing or bug bounty

What You'll Get After Completing the Course

Certificate of Completion

Earn your Android App Security Basics certificate from Eduden, India's rising hub for hands-on cybersecurity education.

Full Access for 30 Days

Access all course modules, labs, videos, and downloadable tools for the full duration — no hidden charges.

Beginner-Friendly. Career-Focused.

Get ready for internship roles in cybersecurity, bug bounty platforms, or your first real mobile security engagement. Perfect stepping stone before advancing into tools like Frida, Objection, or OSCP/OSCE-level mobile testing.

Course Highlights

- 30-Day Beginner-Friendly Mobile Security Training
- Best Android App Hacking Course for Beginners in India
- Hands-On Labs With Real Apps & Tools
- No Prior Mobile Pentesting Experience Required
- Certificate from Eduden – Top Cybersecurity Institute in Kolkata
- Focused on Practical Skills Over Theory
- Built-In Guidance for Further Learning & Certifications
- Hybrid Format – Join Online or Onsite in Kolkata
- Perfect for Freshers, Entry-Level Cybersecurity Aspirants & Developers
