2026 Cyber Security Course With Eduden

Start Your Career in Cyber Security

About Eduden

Welcome to Eduden — where we've thrown boring education out the window and replaced it with hands-on learning, real-world skills, and a vibe that actually makes sense in 2026.

We're not your grandma's school (unless she's into coding, design, and memes). At Eduden, we're flipping the traditional classroom upside down. No whiteboards full of buzzwords. No endless theory. Just solid skills, taught by international trainers, that get you job-ready fast.

Whether you want to be a freelance graphic designer, a Python wizard, a networking pro, or a UI/UX boss, we've got your back. Our hybrid courses (online + offline) are packed with real projects, 100+ practical tasks, and mentorship that doesn't feel robotic. You'll be creating, building, and earning while still laughing at our bad jokes.

And the best part? We don't just teach you and send you off.

Android Application Penetration Testing – Advanced (45 Days Hands -On Course)

Course Objective

Ready to go deeper?

This is where it gets real.
If you've already completed our Android Pentesting Basics course, this Advanced Android Application Penetration Testing program is your next leap into mobile hacking mastery. You'll learn how to bypass security mechanisms, manipulate apps at runtime, and build custom mobile exploits using powerful tools like Frida, Objection, Xposed, and more.

This course is designed to push your skills beyond APK analysis — into the world of dynamic analysis, code injection, and real-time runtime attacks. If you're serious about becoming a professional mobile app pentester, or want to enter Android bug bounty programs, this is the best advanced Android hacking course in India to get you there.

Duration 45 Days	Lectures 30	Projects 5

Eligibility

To enroll in this course, you must have completed Eduden's Android Application Penetration Testing – Basics course and scored at least 90% overall. This course is meant for learners who already understand:

- APK structure and static analysis
- Basic use of Burp Suite and MobSF
- OWASP Mobile Top 10 concepts
- Android emulator setup and traffic interception

Already cracked APKs and sniffed packets?

Now it's time to break encryption, hook functions, and bypass root detection.

- Join our free advanced mobile pentesting info session to preview live demos with Frida and Objection.

Course Overview

In this course, you'll dive into advanced mobile app exploitation techniques. You'll learn how to reverse-engineer real-world applications, hook into functions during runtime, exploit insecure IPC mechanisms, bypass client-side logic and SSL pinning, and tamper with app logic on the fly.

We'll walk you through real-world CVEs, appstore vulnerabilities, and CTF-style labs, designed to challenge your skills and deepen your understanding of secure mobile architecture. This is one of the most practical Android penetration testing courses in Kolkata and India, trusted by both red teamers and aspiring bug bounty hunters.

Assignments

Frida scripting challenges, runtime hook simulations, bypass tasks, and post-exploit analysis — guided with trainer support.

Quizzes

Advanced scenario-based quizzes with disassembly, patching logic, Frida hooks, and mobile security workflows.

Live Sessions

Weekly reverse engineering labs, deep dives into custom CVEs, and real-world vulnerability discussions with experts.

Projects

You'll complete 5 intense mobile hacking challenges:

- Runtime Function Hooking & Tampering with Frida
- Bypassing SSL Pinning and Root Detection
- Exploiting Insecure Inter-Process Communication (IPC)
- Reverse Engineering & Patching a Paid App
- Final Project: Full App Audit + Report Submission with PoC

Course Curriculum & Tools

Advanced Tools Covered:

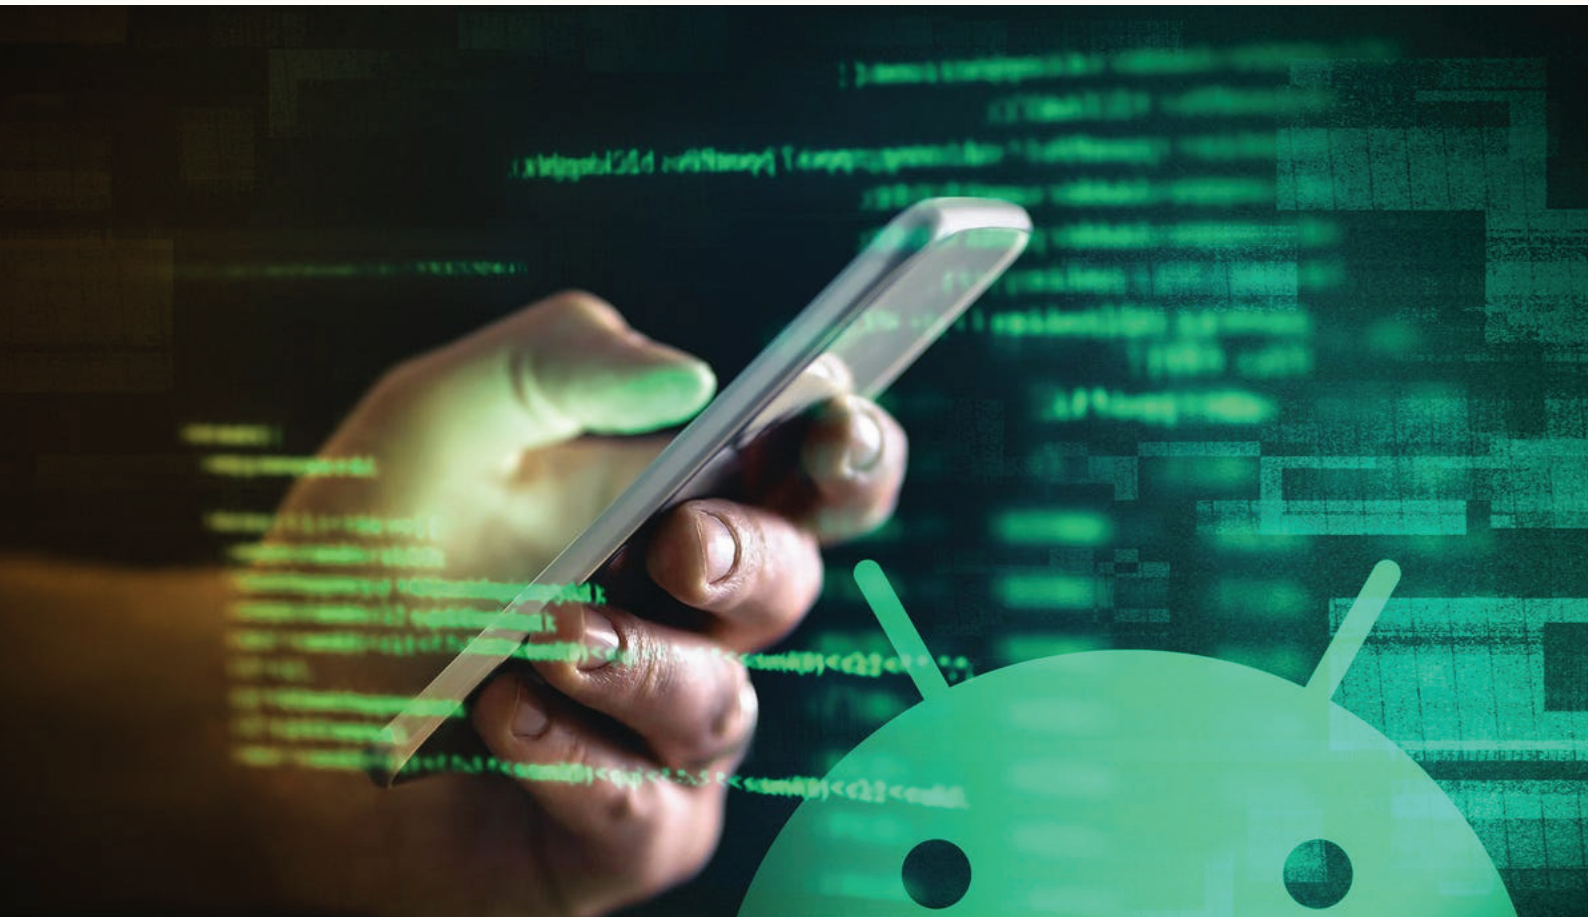

Curriculum Breakdown

✳ Introduction to Dynamic Analysis

- Why dynamic analysis > static alone
- App instrumentation concepts
- Setting up a Frida-ready device
- Frida + Objection environment build

✳ Runtime Hooking & Logic Manipulation

- Hooking Java/Kotlin functions
- Dumping variables in runtime
- Modifying method outputs
- Hands-on: Change in-app behavior via Frida

✳ SSL Pinning & Root Detection Bypass

- Common SSL pinning techniques
- Universal SSL pinning bypass script
- Root detection bypass via runtime patching
- Hands-on: Access blocked features in secured apps

✳ Insecure IPC, Broadcast Receivers & Activities

- Exploiting exported components
- Intent hijacking and injection
- Activity and service abuse
- Hands-on: Hijack a broadcast receiver and escalate access

✳ Reverse Engineering & Patch Testing

- Smali-level modification
- Repackaging and re-signing apps
- Hands-on: Crack a premium feature in a test APK (legally permitted lab)

✳ Final Project & Career Prep

- Simulate an end-to-end mobile audit
- Write a professional pentest report
- Bug bounty workflow overview
- Bug submission writing & etiquette

What You'll Get After Completing the Course

Certificate of Completion

Earn your Advanced Android Pentesting Certificate from Eduden, trusted by recruiters and respected across India's cybersecurity ecosystem.

Full Course Access for 45 Days

Unlimited access to recordings, labs, toolkits, custom Frida scripts, and bonus reverse engineering material for the entire course duration.

Launch into Real-World Roles

You'll be equipped for:

- Android Bug Bounty Hunting
- Mobile Application Security Testing
- Red Team Mobile Assessments
- Freelance App Auditing
- Advanced certifications and job interviews in mobile security

Course Highlights

- 45 Days of Advanced Mobile App Pentesting
- Dynamic Analysis, Runtime Tampering & Real App Exploits
- SSL Pinning & Root Detection Bypass Techniques
- Work with Frida, Objection, Apktool, Xposed & More
- Best Android Application Security Training in India
- Certificate from Eduden – Top Cybersecurity Institute in Kolkata
- Built for Bug Bounty Hunters & Ethical Hackers
- Hybrid Format – Join Online or In-Person in West Bengal
- Final Capstone Project + Reporting Guidance
- Designed for Students Who've Completed the Basic Android Course
