2026 Cyber Security Course With Eduden

Start Your Career in Cyber Security

About Eduden

Welcome to Eduden — where we've thrown boring education out the window and replaced it with hands-on learning, real-world skills, and a vibe that actually makes sense in 2026.

We're not your grandma's school (unless she's into coding, design, and memes). At Eduden, we're flipping the traditional classroom upside down. No whiteboards full of buzzwords. No endless theory. Just solid skills, taught by international trainers, that get you job-ready fast.

Whether you want to be a freelance graphic designer, a Python wizard, a networking pro, or a UI/UX boss, we've got your back. Our hybrid courses (online + offline) are packed with real projects, 100+ practical tasks, and mentorship that doesn't feel robotic. You'll be creating, building, and earning while still laughing at our bad jokes.

And the best part? We don't just teach you and send you off.

Network Penetration Testing – 45 Days Hands-On Course

Course Objective

This is not for the faint of firewalls.

Welcome to Eduden's most advanced cybersecurity course yet — built for ethical hackers, security professionals, and penetration testers who are ready to move beyond tools and into custom scripting, real-world exploitation, and network-level post-exploitation. Inspired by OSCE-style training, this program focuses on network pentesting with Python and Bash, and digs deep into exploit development, evasion, lateral movement, and report writing — all within real-world simulated environments.

If you're looking for the best advanced penetration testing course in Kolkata, and you've already done your CEH, eJPT, or have real-world hacking experience — this course was made for you.

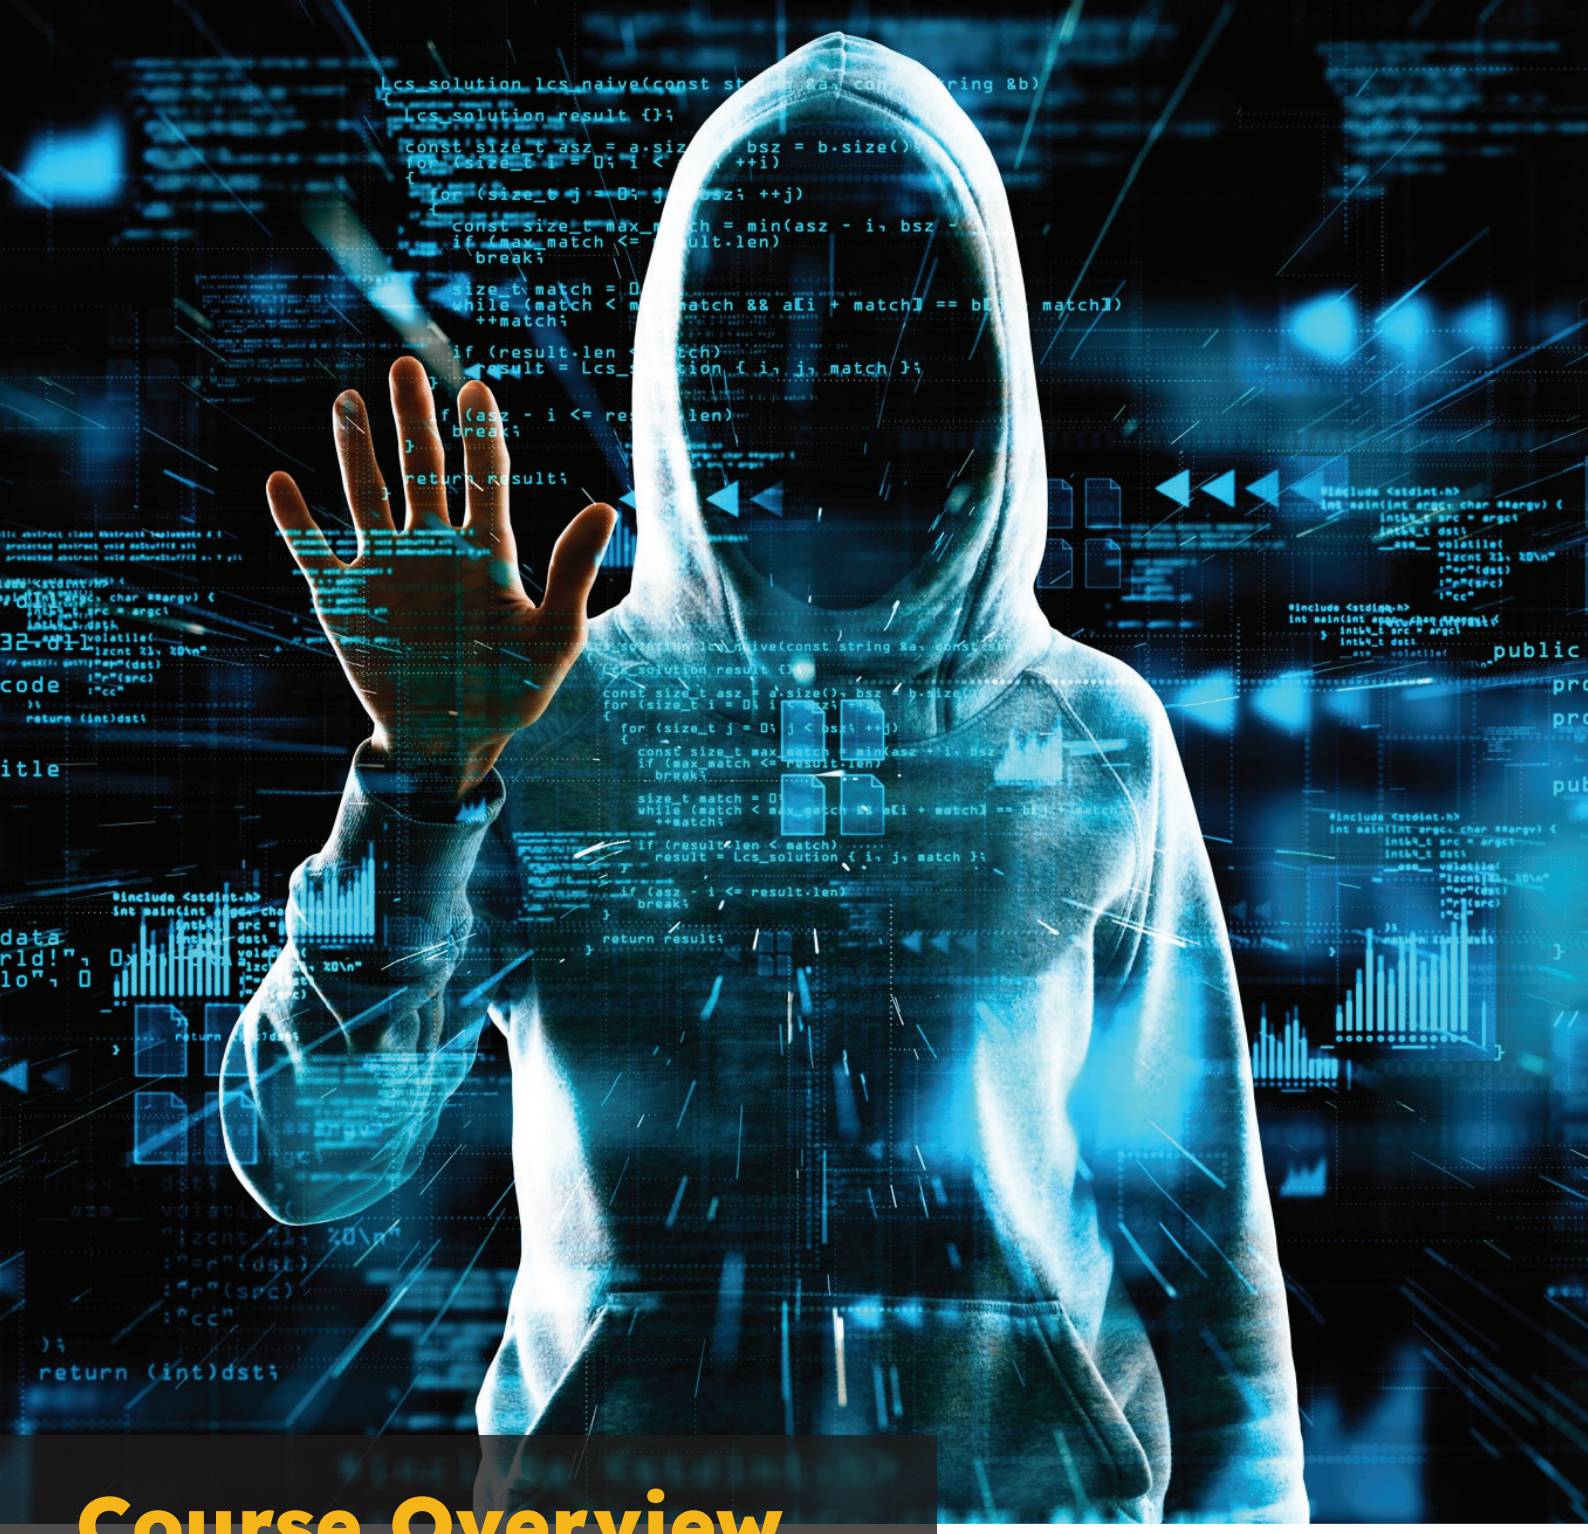

Duration 45 Days	Lectures 36	Projects 5

Eligibility

This is an advanced-level program. To enroll, you must have:

- At least 1 cybersecurity certification (e.g., CEH, eJPT, PNPT, or equivalent) OR
- 1 year of proven industry experience in ethical hacking, system administration, or network security
- Working knowledge of Python and Bash scripting

Course Overview

This 45-day hands-on offensive security course is designed for professionals who want to master the real-world tactics used in red team assessments, vulnerability research, and internal/external network exploitation.

You'll learn how to go from initial access to full network control, bypassing modern security controls like firewalls, antivirus, IDS/IPS, and EDR. Through live labs and realistic attack chains, students will execute custom payloads, write Python/Bash scripts for automation, simulate pivoting across subnets, and craft detailed post-exploitation reports that demonstrate professional-grade assessments.

If you're serious about getting into advanced ethical hacking, red teaming, or want to level up after CEH/OSCP prep — this is one of the top offensive security training programs in India right now.

Assignments

12+ technical write-ups and scripting challenges including payload crafting, custom scanners, lateral movement automation, and log evasion.

Quizzes

Built-in assessment checkpoints after major labs — designed to mimic real pentest decision-making.

Live Sessions

Live weekly exploit walkthroughs, post-exploitation simulations, scripting reviews, and case study discussions.

Projects

Complete 5 advanced projects built on enterprise-like infrastructures

- Exploiting a misconfigured internal service and pivoting into private subnet
- Custom scanner script (Python) to identify live SMB shares across hosts
- Crafting a shellcode injector and evading AV
- Full red team simulation using Bash automation
- Final Pentest Report + Walkthrough on a multi-tier vulnerable network

Course Curriculum & Tools

Key Tools, Frameworks & Languages:

Curriculum Breakdown

⁕ Advanced Reconnaissance & Target Enumeration

- Network mapping strategies
- Subnet scanning with custom tools
- Scripted host fingerprinting
- Identifying weak protocols and outdated services

⁕ Exploitation & Gaining Access

- Exploiting misconfigured services (SMB, RDP, FTP, SNMP, MSRPC)
- Manual and semi-automated exploitation with Python
- Reverse shells, bind shells, and AV bypasses
- Exploiting local privilege escalation vulnerabilities on Windows/Linux

✳ Post-Exploitation & Lateral Movement

- Credential dumping and hash reuse (pass-the-hash / pass-the-ticket)
- Lateral movement across internal network
- Privilege escalation techniques
- Custom Bash scripts to automate pivoting
- AV/EDR evasion techniques (basic obfuscation)

✳ Active Directory Enumeration & Attacks (Intro)

- LDAP enumeration
- Kerberoasting & AS-REP Roasting (via Impacket)
- Attacking AD through Windows hosts (BloodHound lite)

✳ Custom Exploit Development (Basic Level)

- Fuzzing vulnerable services
- Writing basic buffer overflow exploits
- Payload generation and customization
- Shellcode injection scripting with Python

✳ Reporting & Documentation

- Building professional pentest reports
- Risk-based vulnerability scoring
- Report writing structure: Findings > Impact > Recommendations
- Client-ready documentation templates

What You'll Get After Completing the Course

Certificate of Completion

Students completing all projects, scripting tasks, and final reporting review will earn an Advanced Network Penetration Testing Certificate by Eduden — recognized among top cybersecurity training providers in India.

Full Access for 45 Days

Download labs, tools, recordings, templates, and scripts. You'll have unrestricted access to our secure lab environment throughout the course.

Ready for Real Jobs, Red Team Internships, or OSCP Prep

You'll graduate with a battle-tested portfolio, scripting experience, and the confidence to handle red teaming assessments, client-facing pentests, or take on certifications like OSCP, PNPT, or CRTP.

Course Highlights

- 45-Day Advanced Offensive Security Training in Kolkata
- Network Exploitation with Real-World Scenarios
- Write Your Own Tools in Python and Bash
- Full Post-Exploitation Workflow with Lateral Movement
- Advanced Labs Inspired by OSCE / CRTO
- Built for Working Professionals in Cybersecurity
- Weekly Live Labs, Reporting Mentorship & Career Support
- Certificate from Eduden – One of the Best Cybersecurity Institutes in India
- Hybrid Access – Attend Online from Anywhere or Join Onsite in Kolkata
- SEO-friendly, Skill-Stack Ready, Built to Push You Past “Script Kiddie” Level
