# IoT Course With Eduden

## Start Your Career in IOT

# About Eduden

Welcome to Eduden — where we've thrown boring education out the window and replaced it with hands-on learning, real-world skills, and a vibe that actually makes sense in 2026.

We're not your grandma's school (unless she's into coding, design, and memes). At Eduden, we're flipping the traditional classroom upside down. No whiteboards full of buzzwords. No endless theory. Just solid skills, taught by international trainers, that get you job-ready fast.

Whether you want to be a freelance graphic designer, a Python wizard, a networking pro, or a UI/UX boss, we've got your back. Our hybrid courses (online + offline) are packed with real projects, 100+ practical tasks, and mentorship that doesn't feel robotic. You'll be creating, building, and earning while still laughing at our bad jokes.

And the best part? We don't just teach you and send you off.

# IoT Foundations - 30 Days Hands-On Learning Program

## Course Objective

To help learners understand how smart devices collect, process, and transmit data, and how the Internet of Things powers modern applications — from smart homes and wearables to industrial automation.

You'll learn the basics of microcontrollers (like Arduino/ESP), sensors, actuators, networking, and IoT cloud platforms, ending with a project that brings it all together.

**Duration:** 30 Days

**Format:** Hybrid (Online + Offline at Eduden, Kolkata)

**Level:** Beginner to Intermediate

## Who Can Join

- Students (no coding/electronics background needed)
- Makers, inventors, and tech hobbyists
- Future robotics, electronics, or embedded engineers
- Professionals switching to IoT or automation domains

# Course Breakdown

## Module 1

### Introduction to IoT & Ecosystem Overview

- What is IoT? Use cases & industries
- Components of an IoT system
- Edge devices, gateways, cloud platforms
- Hands-on: Explore and identify IoT gadgets

## Module 2

# Microcontrollers & Programming (Arduino/ESP)

- Arduino board overview, IDE setup
- GPIO, digital/analog signals
- Uploading your first program (blinking LED)
- Hands-on: Control LED & buzzer with Arduino

## Module 3

# Sensors & Actuators in IoT

- Types of sensors: temperature, light, gas, motion
- Interfacing sensors with Arduino
- Actuators: motors, relays, servos
- Hands-on: Create a motion-detection alarm system

## Module 4

# Connectivity & Networking

- Wired vs wireless communication (WiFi, BLE, Zigbee)
- Using ESP8266/ESP32 for Wi-Fi based devices
- HTTP, MQTT protocols (intro)
- Hands-on: Send data from sensor to web dashboard

## Module 5

# IoT & the Cloud

- Cloud platforms: ThingSpeak, Blynk, Firebase (intro)
- Real-time data logging & visualization
- Mobile app control for IoT devices
- Hands-on: Display temperature sensor data in real-time via cloud

## Module 6

# Final Project + Real-World Applications

- Project Planning & Hardware Checklist
- Sample Projects:
    1. Smart Home Automation (Fan + Lights)
    1. Weather Station with Live Data
    1. IoT Plant Monitoring System
- Hands-on: Build & present your IoT project demo

## Certification

- Eduden Certificate in IoT Foundations
- Project demo + code submission
- Github portfolio (optional) for tech learners

## Career Outcomes

- Get started in IoT, embedded systems, automation
- Build a portfolio for internships or college projects
- Perfect stepping stone to Advanced IoT, Robotics, or AI+IoT integration

# Course Highlights

- 30 Days of Practical IoT Training from Scratch
- Best IoT Beginner Course in India with Projects
- Learn with Arduino, ESP32, and Real Sensors
- Build Working Prototypes You Can Showcase
- Certificate from Eduden – India’s Tech-First Training Institute
- Hybrid Format – Online or Offline (Labs Available)
- Great for Students, Innovators, and Job Seekers in IoT
