Get hired.

About Eduden

Welcome to Eduden — where we've thrown boring education out the window and replaced it with hands-on learning, real-world skills, and a vibe that actually makes sense in 2026.

We're not your grandma's school (unless she's into coding, design, and memes). At Eduden, we're flipping the traditional classroom upside down. No whiteboards full of buzzwords. No endless theory. Just solid skills, taught by international trainers, that get you job-ready fast.

Whether you want to be a freelance graphic designer, a Python wizard, a networking pro, or a UI/UX boss, we've got your back. Our hybrid courses (online + offline) are packed with real projects, 100+ practical tasks, and mentorship that doesn't feel robotic. You'll be creating, building, and earning while still laughing at our bad jokes.

And the best part? We don't just teach you and send you off.

atabase Mastery: SQL + NoSQL (MongoDB & MariaDB) – 45 Days Hands-On Training

Course Objective

From relational databases to NoSQL document stores — this is the only database course you need.

In Eduden's Database Mastery program, you'll go deep into SQL fundamentals, relational design, ER modeling, and advanced queries — while also getting hands-on with MongoDB and MariaDB, two of the most widely-used real-world database systems today.

You'll learn when to use what, how to structure data for scalability, and how to integrate databases into actual applications. Whether you're a backend developer, full-stack learner, data analyst, or system designer — this course gives you all the tools to handle modern data challenges.

Looking for the best SQL + MongoDB training in Kolkata, West Bengal, or anywhere in India? Welcome to your database command center.

Duration 45 Days	Lectures 30+	Projects 4+

Eligibility

- No prior DB experience required
- Ideal for students, backend/full-stack learners, aspiring data analysts, or anyone prepping for tech interviews
- Basic programming logic (Python/JavaScript helpful, not required)

Unsure when to use SQL vs NoSQL?

- Join our free DBMS + Mongo + Maria overview session and learn how real-world apps mix both models.

Course Overview

Over 45 days, you'll go from designing normalized databases with ER diagrams and writing SQL queries to building and querying document-based data with MongoDB, and working with MariaDB — a drop-in replacement for MySQL used globally by large-scale applications.

This course blends classic RDBMS training (theory + MySQL/MariaDB) with modern NoSQL practice (MongoDB), preparing you for any project stack — backend APIs, real-time dashboards, or eCommerce systems.

Assignments

ER diagrams, relational schemas, query tasks in SQL and Mongo shell, NoSQL document structuring, data migration challenges.

Quizzes

Topic-wise assessments on DBMS theory, SQL logic, Mongo syntax, indexing, and schema best practices.

Live Sessions

Schema reviews, query live coding, data modeling walkthroughs, and system design challenges weekly with mentors.

Projects

You'll build 4 hands-on database applications:

- Student Database in MariaDB (ER + SQL Queries)
- Inventory System in MySQL with CRUD + Constraints
- Blog + Comments Collection System in MongoDB
- Analytics Dashboard Data Store in MongoDB with Aggregation

Final Project: Design a hybrid app backend using MariaDB + MongoDB, optimized for read/write balance

Course Curriculum & Tools

Tech You'll Use:

Curriculum Breakdown

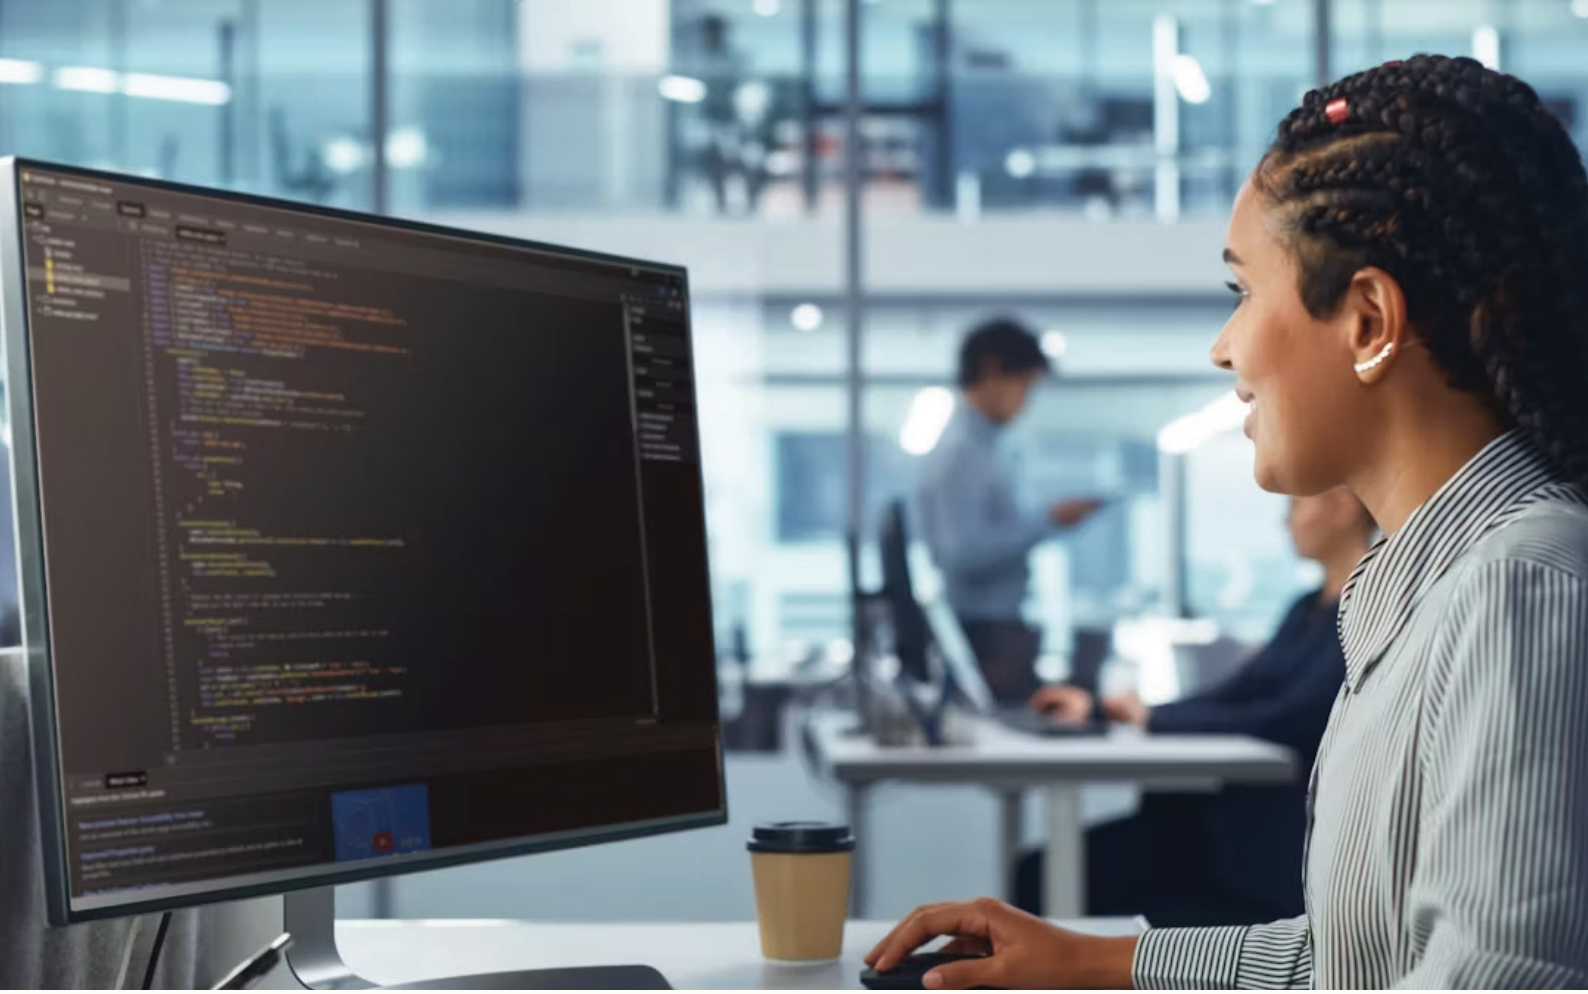

✳ DBMS & Relational Thinking

- Tables, attributes, keys, relationships
- ERD design and schema mapping
- Relational vs non-relational data structures
- Normalization (1NF to BCNF)

✳ SQL with MySQL & MariaDB

- CREATE, SELECT, UPDATE, DELETE
- Joins, subqueries, group by, having
- Functions: COUNT, AVG, MIN, MAX
- Constraints, triggers, indexes
- Hands-on: Create normalized, query-optimized schema

✳ MongoDB & NoSQL Basics

- Documents, collections, _id
- Inserting and querying JSON-like docs
- MongoDB shell vs Compass GUI
- Nested data, arrays, referencing vs embedding
- Hands-on: Build a product catalog with category aggregation

✳ Advanced MongoDB

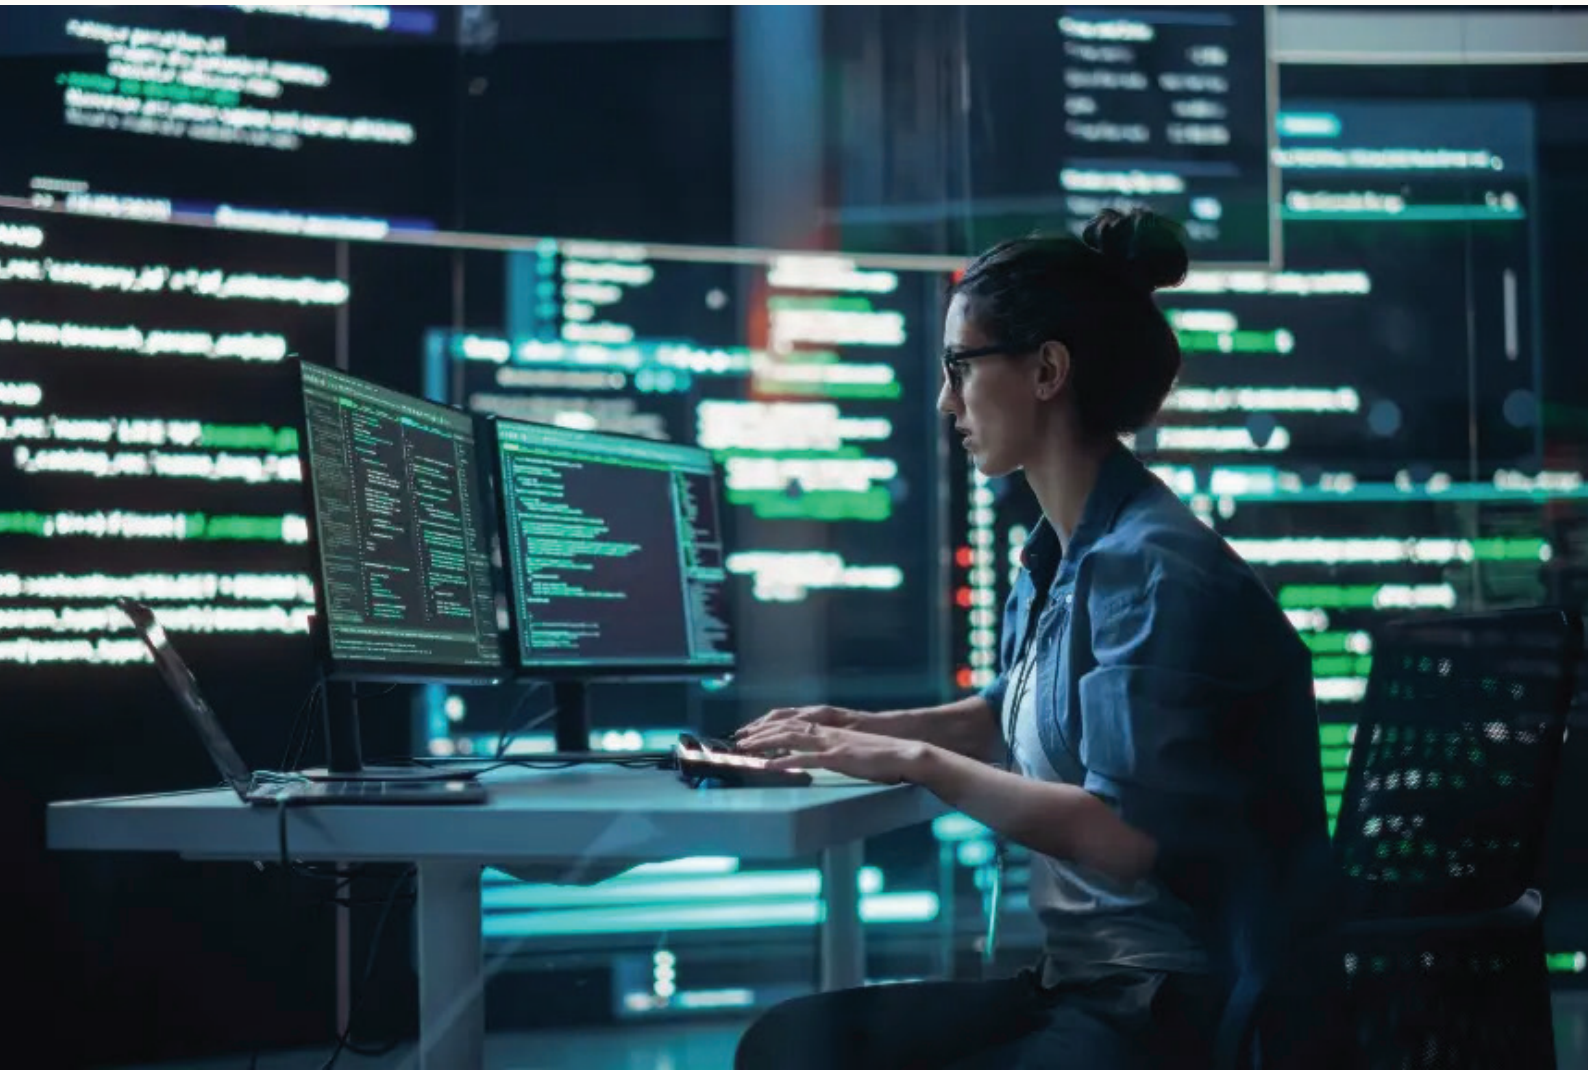

- Indexes and performance
- Aggregation pipelines
- Projection, sorting, matching, grouping
- CRUD with Mongoose (intro for devs)
- Hands-on: Create analytics logic with pipeline operators

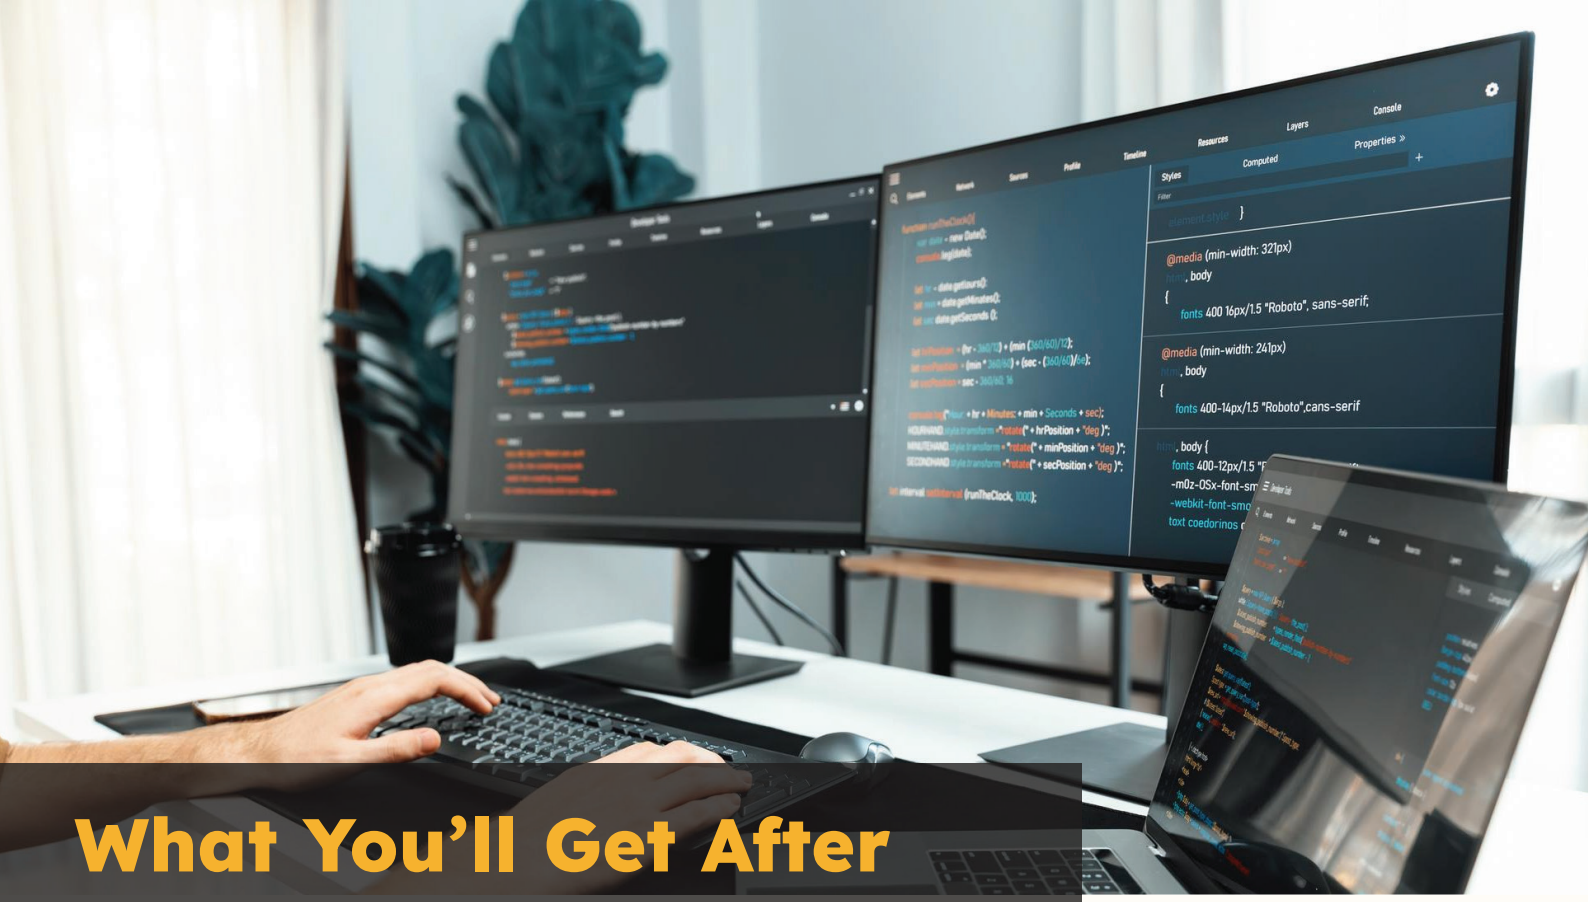

✳ Cross-DB Integration & Use-Cases

- When to use SQL, NoSQL, or both
- Real-world design patterns (e.g., MongoDB for logs, MariaDB for transactions)
- Connecting DBs to apps with Python or Node.js (intro only)
- Hands-on: Design a hybrid backend for speed and consistency

✳ Final Project & Interview Prep

- Design, model, and write a backend-ready database
- Showcase schema, queries, performance logic
- Prepare for SQL/Mongo DBMS interview questions
- Capstone Presentation

What You'll Get After Completing the Course

Certificate of Completion

Earn your Database Mastery Certificate from Eduden, recognized by employers and tech recruiters across India.

Full 45-Day Access

You'll get all class recordings, sample queries, schema templates, and project files for the full course duration.

What You'll Be Ready For:

Perfect prep for:

- Backend & Full-Stack Interviews
- Data Analyst Internships
- Job roles involving MySQL, MariaDB, MongoDB
- Any project requiring fast and scalable database architecture
- Freelance or startup backend systems

Course Highlights

- 45 Days of Hands-On SQL + NoSQL Database Training
- Covers DBMS Concepts + Modern Databases in One Track
- Best Database Training in India – MySQL, MongoDB & MariaDB
- 4 Projects + 1 Cross-DB Final Capstone
- Certificate from Eduden – West Bengal's Top Practical Tech Institute
- Live Mentorship, Weekly Labs, and Interview Prep
- Hybrid Format – Online & Offline Options Available
- Built for Developers, Analysts, and Builders
