Get hands-on,
Get hired.

About Eduden

Welcome to Eduden — where we've thrown boring education out the window and replaced it with hands-on learning, real-world skills, and a vibe that actually makes sense in 2026.

We're not your grandma's school (unless she's into coding, design, and memes). At Eduden, we're flipping the traditional classroom upside down. No whiteboards full of buzzwords. No endless theory. Just solid skills, taught by international trainers, that get you job-ready fast.

Whether you want to be a freelance graphic designer, a Python wizard, a networking pro, or a UI/UX boss, we've got your back. Our hybrid courses (online + offline) are packed with real projects, 100+ practical tasks, and mentorship that doesn't feel robotic. You'll be creating, building, and earning while still laughing at our bad jokes.

And the best part? We don't just teach you and send you off.

Python Programming – Gateway to AI & Machine Learning

Course Objective

Think coding is scary? Not here. This course is built for the curious — the ones who want to automate tasks, play with data, or just finally understand what Python is all about. Whether you're a complete beginner or someone who's tried YouTube tutorials that made no sense — this is your clean, structured start into the world of code.

We'll teach you the real Python skills you need to build things — from calculators and automation scripts to your first AI-powered app. No fluff, just 30 days of practical learning that sets you up for freelancing, internships, or advanced tech courses in ML and Data Science.

Duration 30 Days	Lectures 24	Projects 4

Course Overview

This hands-on Python course is designed to teach you the fundamentals of programming and help you transition into more advanced fields like AI, machine learning, or data analysis.

We start from zero — no prior coding knowledge required — and walk you through the basics of variables, loops, functions, and file handling. You'll write code daily, complete logic challenges, build working mini projects, and understand how Python is used to automate tasks and power real-world applications.

By the end, you'll be able to read and write clean Python code, solve beginner problems, and build projects that you can show off on GitHub or in interviews.

Assignments

10+ coding assignments uploaded to GitHub or shared in Slack. Designed for logic building and skill development.

Quizzes

Each module comes with short quizzes and brain teasers to lock in your learning and keep it fun.

Live Sessions

Live weekly coding reviews + real-time debugging with mentors. You'll never feel stuck or alone.

Projects

You'll work on 4 practical projects, including:

- Calculator with a GUI
- Personal Expense Tracker
- Basic Chatbot or Quiz App
- Final Project: Data Scraper or ML-ready CSV Generator

Course Curriculum & Tools

Tools You'll Use:

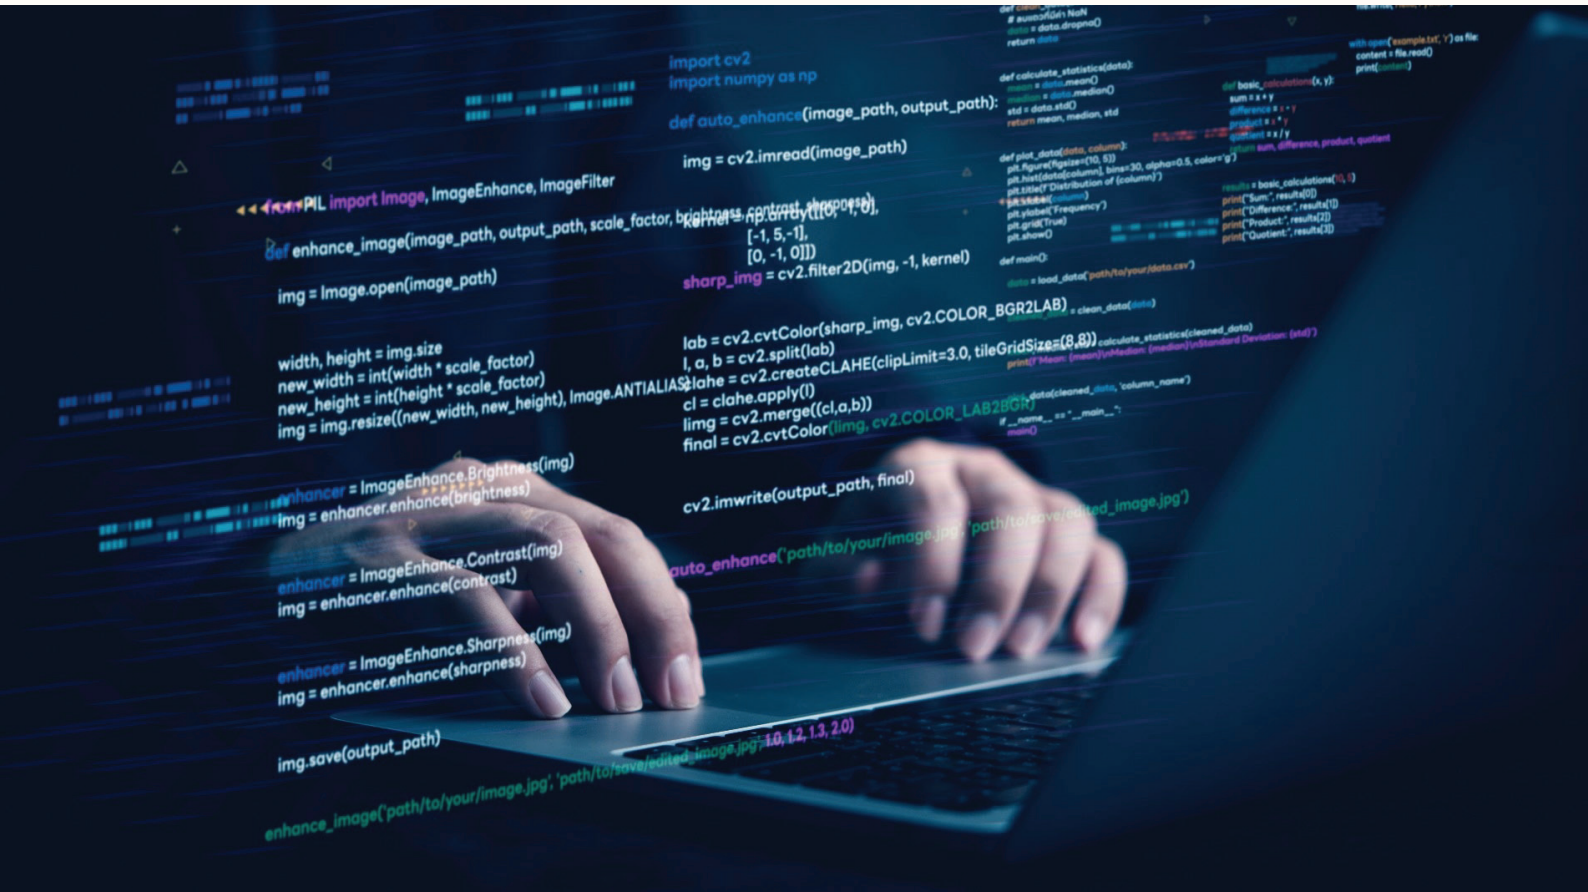

Curriculum Breakdown

✳ Getting Started with Python

- Installing Python, IDE setup (VS Code, Jupyter)
- Writing your first script
- Printing, user input, basic syntax

✳ Variables, Data Types & Operators

- Working with strings, integers, floats, booleans
- Typecasting and expressions
- Arithmetic, logical, comparison operations
- Real-world use: basic calculator logic

✳ Conditions & Loops

- If-else logic
- For and While loops
- Loop control with break and continue
- Real-world use: validation and automation

✳ Functions & Code Structuring

- Creating and calling functions
- Arguments and return values
- Organizing code for readability
- Project: Simple Quiz or To-Do App using functions

✳ Data Structures in Python

- Lists, Tuples, Dictionaries, Sets
- When to use what
- Working with nested data
- Project: Contact Book or Data Sorter

✳ File Handling & Python Automation

- Reading and writing files
- Working with CSV
- Automating a simple task
- Project: Expense Tracker or Log Analyzer

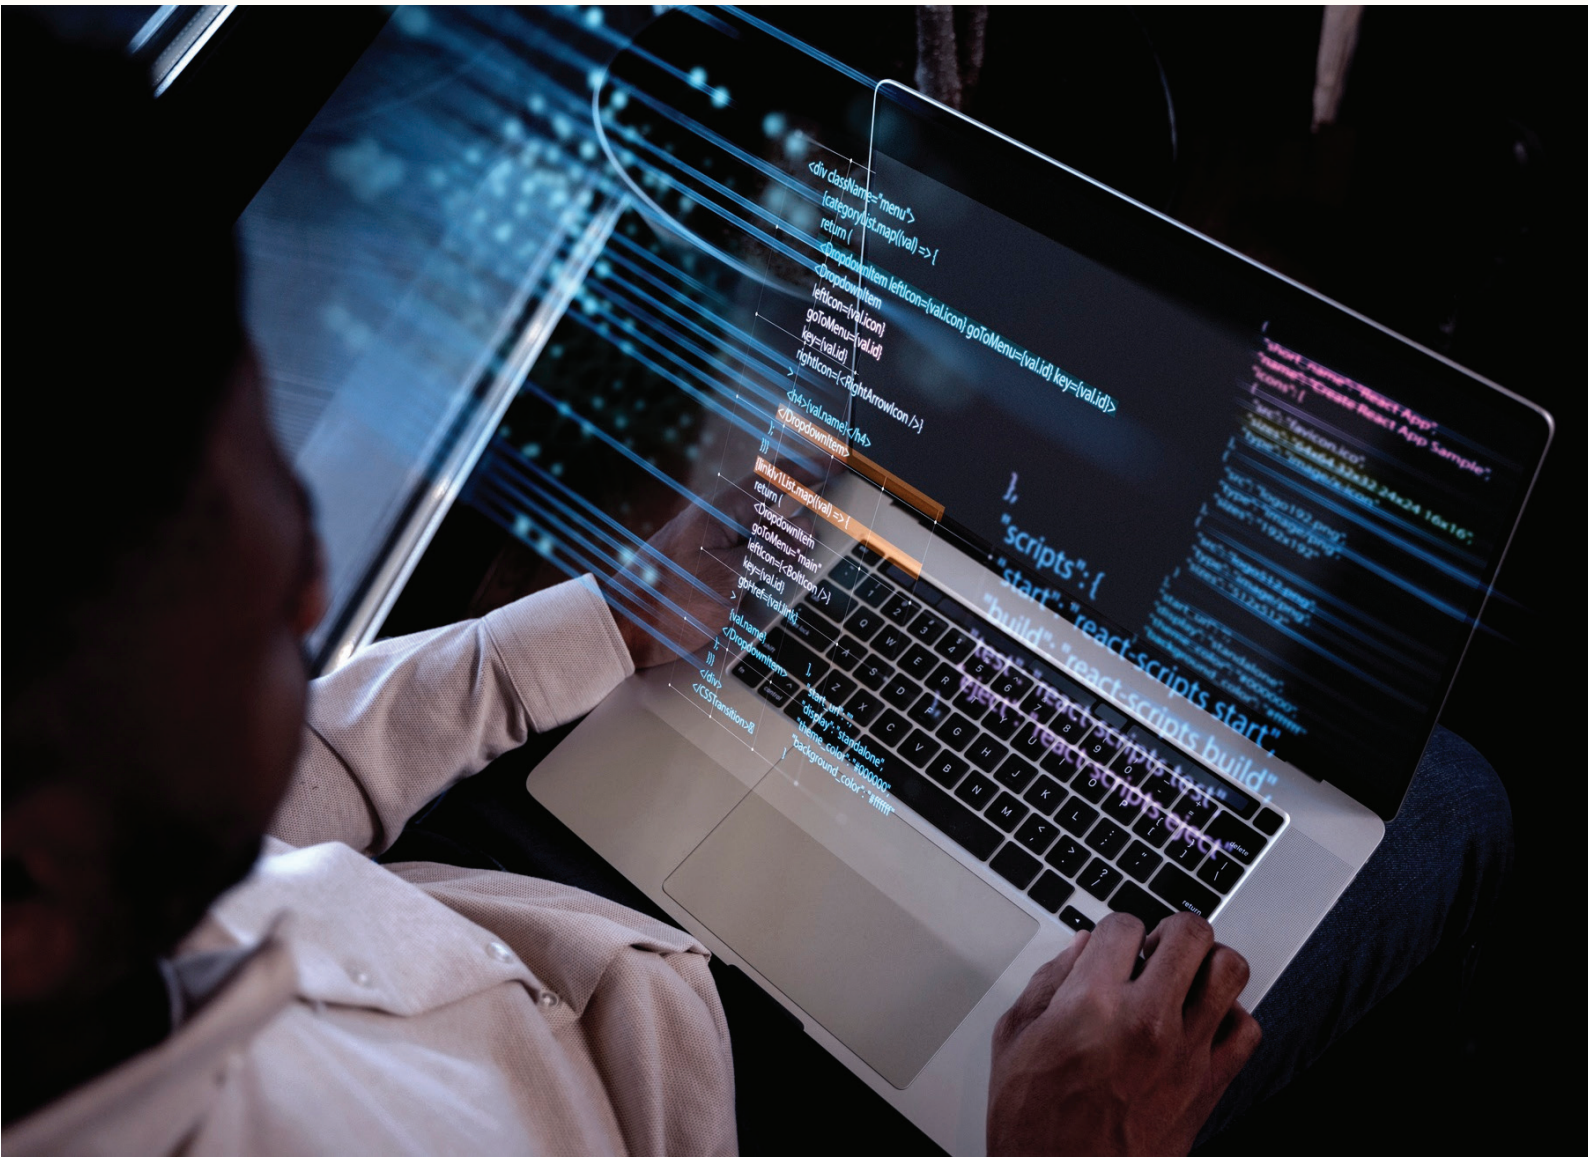

✳ Your First Steps Toward ML

- What is Machine Learning?
- Intro to data libraries: Pandas & NumPy (basic exposure)
- Working with datasets in CSV
- Building a dataset-ready Python script

✳ Final Project & GitHub Portfolio

- Build and upload your final project to GitHub
- Project feedback + version control basics
- Presentation tips and certificate criteria

What You'll Get After Completing the Course

Certificate of Completion

Earn a certificate when you complete the assignments, quizzes, and final project with at least 50% score.

100% Access Throughout the Duration

Enjoy full access to course materials, tools, and community for the entire 30-day duration — no subscription drama.

Launchpad for ML & AI

You'll leave this course ready to start learning machine learning, data analysis, or automation — or even start freelancing with Python-based scripts.

Course Highlights

- 30-Day Hybrid Format (Online + Offline Access)
- Perfect for Absolute Beginners
- Learn to Code with Confidence
- 4 Practical Projects + 10+ Assignments
- Python for Automation, Logic, and Data
- Intro to AI & ML Readiness
- Weekly Live Mentoring
- GitHub Portfolio Development
- Certificate of Completion
- Freelance and Internship Guidance
- Mentored by Industry Pros
