About Eduden

Welcome to Eduden — where we've thrown boring education out the window and replaced it with hands-on learning, real-world skills, and a vibe that actually makes sense in 2026.

We're not your grandma's school (unless she's into coding, design, and memes). At Eduden, we're flipping the traditional classroom upside down. No whiteboards full of buzzwords. No endless theory. Just solid skills, taught by international trainers, that get you job-ready fast.

Whether you want to be a freelance graphic designer, a Python wizard, a networking pro, or a UI/UX boss, we've got your back. Our hybrid courses (online + offline) are packed with real projects, 100+ practical tasks, and mentorship that doesn't feel robotic. You'll be creating, building, and earning while still laughing at our bad jokes.

And the best part? We don't just teach you and send you off.

Python for Offensive PenTest – 45 Days Hands-On Training

Course Objective

Python is the hacker's paintbrush. Ready to sketch some exploits?

Welcome to Eduden's Python for Offensive PenTest course — a hands-on training experience where you'll use Python not just to automate tasks, but to build your own pentesting tools, write exploits, craft payloads, and even simulate red team actions.

This is not your average Python course. This is where you turn scripts into real power — designed specifically for ethical hackers, bug bounty hunters, red teamers, and cybersecurity students looking to level up.

If you're searching for the best Python hacking course in India to learn how to code like an attacker, you've landed in the right terminal.

Duration 45 Days	Lectures 30	Projects 4

Eligibility

To join this course, you should have:

- Basic Python knowledge (variables, loops, functions, imports)
- Prior exposure to cybersecurity, Linux, or ethical hacking
- Completion of Eduden's Python Basics or Ethical Hacking course is highly recommended

Want to stop using other people's tools and build your own instead?

- Join our free Python-for-hackers seminar and see how top pentesters write their own scripts.

Course Overview

This 45-day course teaches you how to leverage Python for real-world offensive security work — from automating recon to building port scanners, brute forcers, keyloggers, backdoors, and reporting bots.

You'll use popular libraries like socket, scapy, requests, paramiko, and nmap to code your own attack tools. Each lesson is practical, each project solves a real security problem, and by the end, you'll be able to confidently say:
"I built this exploit from scratch."

Whether you're preparing for OSCP, PNPT, or bug bounty programs, this course is your hacker toolkit — coded in Python.

Assignments

Custom scripting tasks covering network mapping, payload crafting, packet sniffing, file exfiltration, and bypass automation.

Quizzes

Knowledge checks after each concept, focusing on code logic, vulnerability use-cases, and script performance.

Live Sessions

Weekly coding breakdowns, malware analysis labs, and exploit build challenges with real red teamers.

Projects

You'll build 4 key offensive tools, plus a final all-in-one framework:

- Custom Port Scanner with Service Detection
- SSH Brute Force Script with Banner Capture
- Packet Sniffer with Keyword Alerting
- Reverse Shell Generator with Obfuscation
- Final Project: Modular Pentest Toolkit with CLI Menu

Course Curriculum & Tools

Python Libraries & Tools Covered:

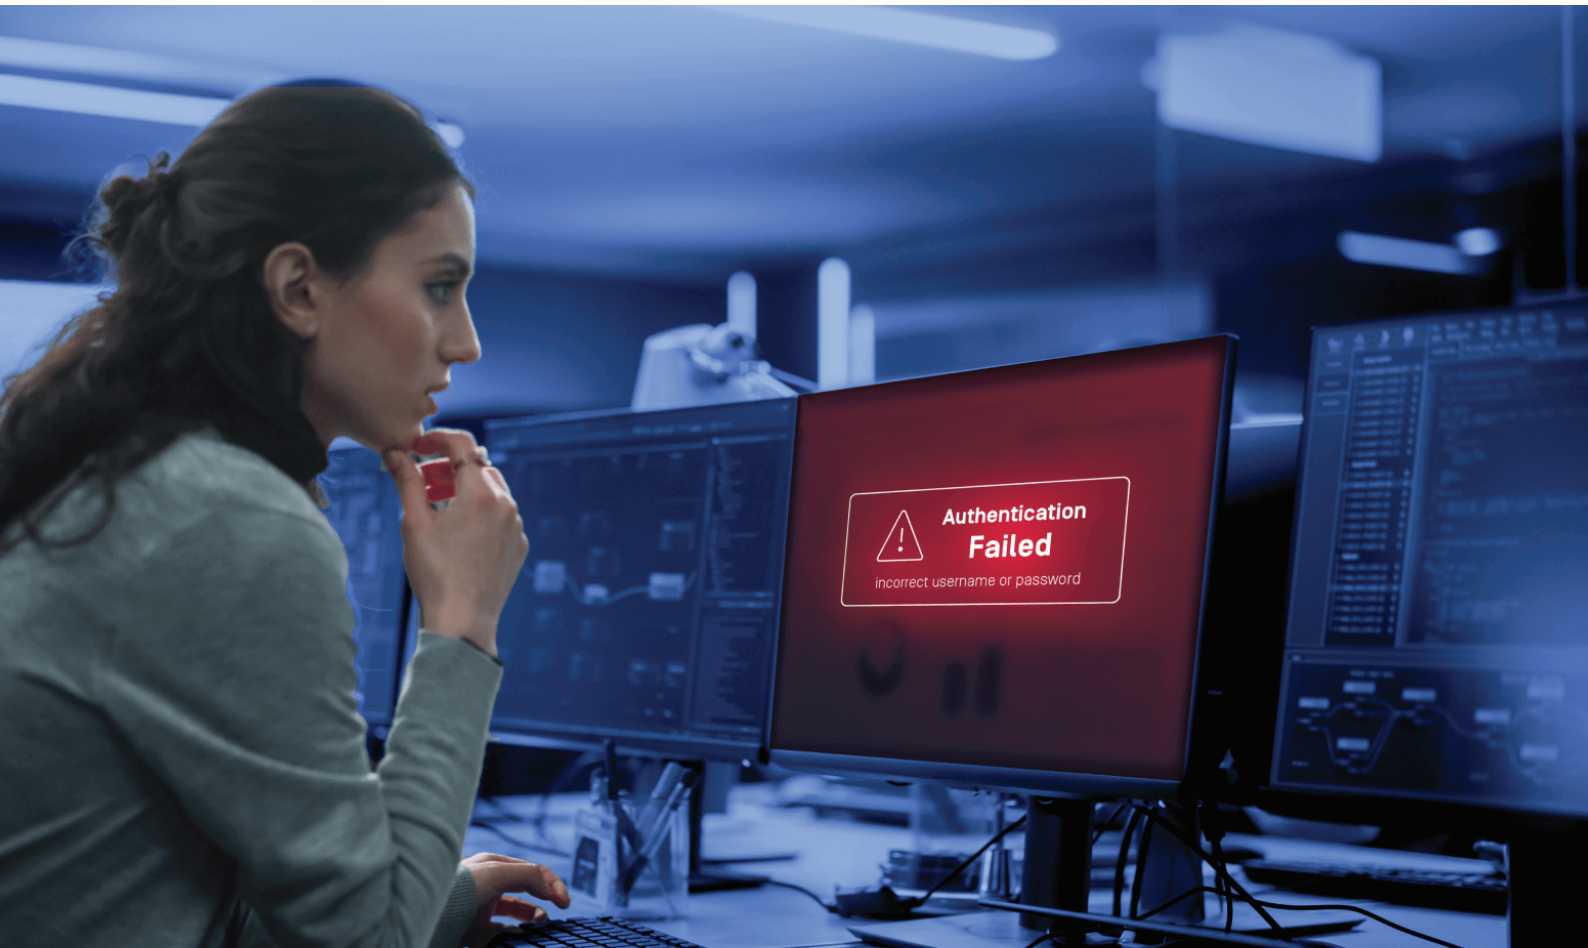

Curriculum Breakdown

✳ Offensive Python 101

- Why Python is perfect for hackers
- Working with sockets & subprocesses
- Building a command-based scanner

✳ Recon & Enumeration Scripts

- DNS recon, WHOIS lookups, Shodan API integration
- Automate nmap scans & output parsing
- Hands-on: Build a recon toolkit script

⁕ Brute Force & Credential Harvesting

- SSH brute force with paramiko
- HTTP login form attack with requests
- Custom wordlist automation
- Hands-on: Brute force attack + logging

⁕ Packet Sniffing & Traffic Analysis

- Working with scapy for packet capture
- Keyword filtering, session hijacking (safe lab use)
- Hands-on: Packet sniffer script with alert system

✳ Exploits & Payloads

- Reverse shell scripting (Linux/Windows)
- Simple keylogger + clipboard sniffer
- Encoding payloads (base64, XOR, etc.)
- Hands-on: Craft & deliver a test payload

✳ Automation & Post Exploitation

- Automating report generation
- Exfiltrating files via scripts
- Uploading data to webhook or Telegram bot
- Final Project: Full exploitation chain in Python

What You'll Get After Completing the Course

Certificate of Completion

Get certified by Eduden – India's top offensive security training institute. Show your GitHub repo, tools, and final project as proof you know your stuff.

Full Course Access

Every video, script, walkthrough, and lab is yours for 45 days. Reuse the scripts, tweak them, make them your own.

Job & Real-World Read

This course preps you for:

- OSCP/PNPT lab challenges
- Bug bounty scripting
- Red team support roles
- Cybersecurity tool development
- CTFs, malware analysis, and automation jobs

Course Highlights

- 45-Day Hands-On Python for Pentesters Training
- Build Custom Exploits, Payloads & Scanners
- Best Python for Ethical Hacking Course in India
- Certificate from Eduden – Respected in India's Cybersecurity Industry
- Projects You'll Actually Use in Real Assessments
- Designed for OSCP, Bug Bounty & Red Team Prep
- Taught by Python-Savvy Hackers, Not Just Devs
- Hybrid Format – Online or Offline in Kolkata
- Build a Portfolio of Tools to Showcase Your Skills
