About Eduden

Welcome to Eduden — where we've thrown boring education out the window and replaced it with hands-on learning, real-world skills, and a vibe that actually makes sense in 2026.

We're not your grandma's school (unless she's into coding, design, and memes). At Eduden, we're flipping the traditional classroom upside down. No whiteboards full of buzzwords. No endless theory. Just solid skills, taught by international trainers, that get you job-ready fast.

Whether you want to be a freelance graphic designer, a Python wizard, a networking pro, or a UI/UX boss, we've got your back. Our hybrid courses (online + offline) are packed with real projects, 100+ practical tasks, and mentorship that doesn't feel robotic. You'll be creating, building, and earning while still laughing at our bad jokes.

And the best part? We don't just teach you and send you off.

Shell Scripting – 30 Days Hands-On Training

Course Objective

Let's automate the boring stuff — one line at a time.

Welcome to Eduden's Shell Scripting course — a 30-day hands-on training program built for anyone who wants to master the Linux terminal, write powerful Bash scripts, and automate real tasks like a pro.

Whether you're in cybersecurity, DevOps, IT support, or just tired of typing the same commands every day, this course teaches you how to write clean, reusable, and efficient scripts that actually get things done.

Looking for the best shell scripting course in Kolkata, India or online across West Bengal? This is where automation begins.

Duration 30 Days	Lectures 24	Projects 3

Eligibility

This course is open to anyone with:

- Basic Linux/terminal knowledge
- Any cybersecurity, DevOps, or system admin background (optional, but helpful)
- No prior coding experience required — we teach from scratch

Want to stop Googling "how to loop in Bash"?

- Join our free shell scripting demo session to see how scripting makes your daily tasks 10x easier.

Course Overview

This course is your fast-track to writing Bash shell scripts on Linux. You'll learn the fundamentals of scripting — variables, loops, conditionals, functions — and quickly move into real-world applications like file manipulation, automation, cron jobs, and system monitoring.

We won't just teach syntax. We'll teach how to think in Bash, debug scripts, and turn logic into actual, useful tools — whether you're working with Kali Linux, Ubuntu, Red Hat, or any other flavor of Linux.

By the end, you'll be automating repetitive tasks, creating custom command-line tools, and feeling right at home inside the terminal.

Assignments

Daily script challenges covering logic building, conditional workflows, and real use cases.

Quizzes

Syntax checks, script flow puzzles, and debugging logic tests after each module.

Live Sessions

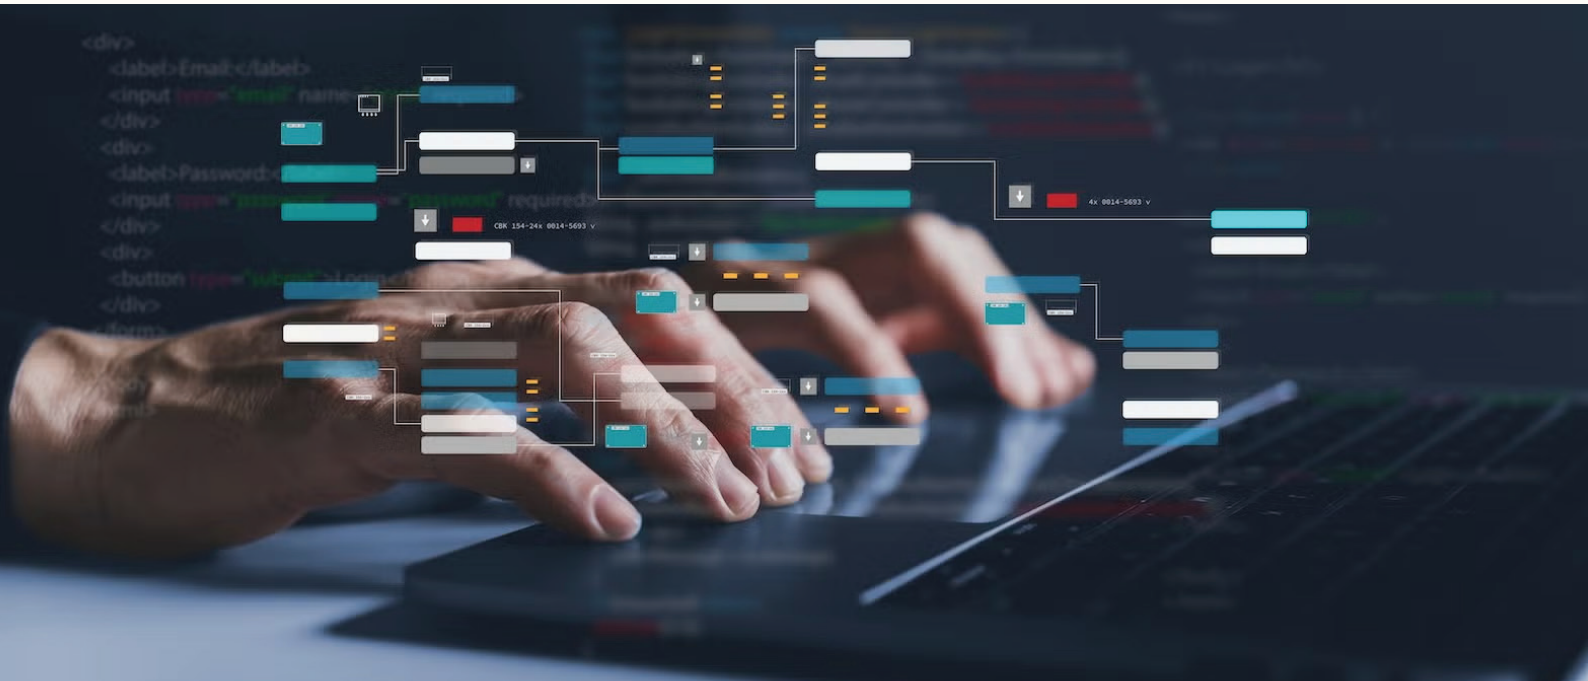

Weekly coding walkthroughs, script reviews, automation demos, and live error solving with mentors.

Projects

You'll build 3 practical tools using Shell Scripting:

- System Health Monitor – CPU, RAM, and Disk usage report
- Backup & Restore Tool – Archive and recover directories via script
- Log Analyzer Script – Find patterns, errors, and summaries from large log files

Final Project: Automate a full task workflow with scheduling and user input

Course Curriculum & Tools

Tools You'll Work With:

Curriculum Breakdown

✳ Shell Scripting Basics

- What is shell scripting?
- Running and debugging your first .sh script
- Permissions, execution, and shebang lines
- Variables and echo statements

✳ Logic & Conditionals

- if, elif, else blocks
- test command and condition operators
- Hands-on: System info reporting script

⁕ Loops & Input

- for, while, and until loops
- Reading user input and arguments ($1, $2, $@)
- Automating repetitive tasks with loops
- Hands-on: Rename files or process logs in bulk

⁕ Functions & Reusability

- Creating and calling functions
- Passing arguments to functions
- Hands-on: Modularize a large script into clean blocks

⁕ File Operations & String Handling

- Reading, writing, appending files
- Search and replace with sed, awk, grep
- File validation, pattern matching, and permissions
- Hands-on: Log parser with error detection

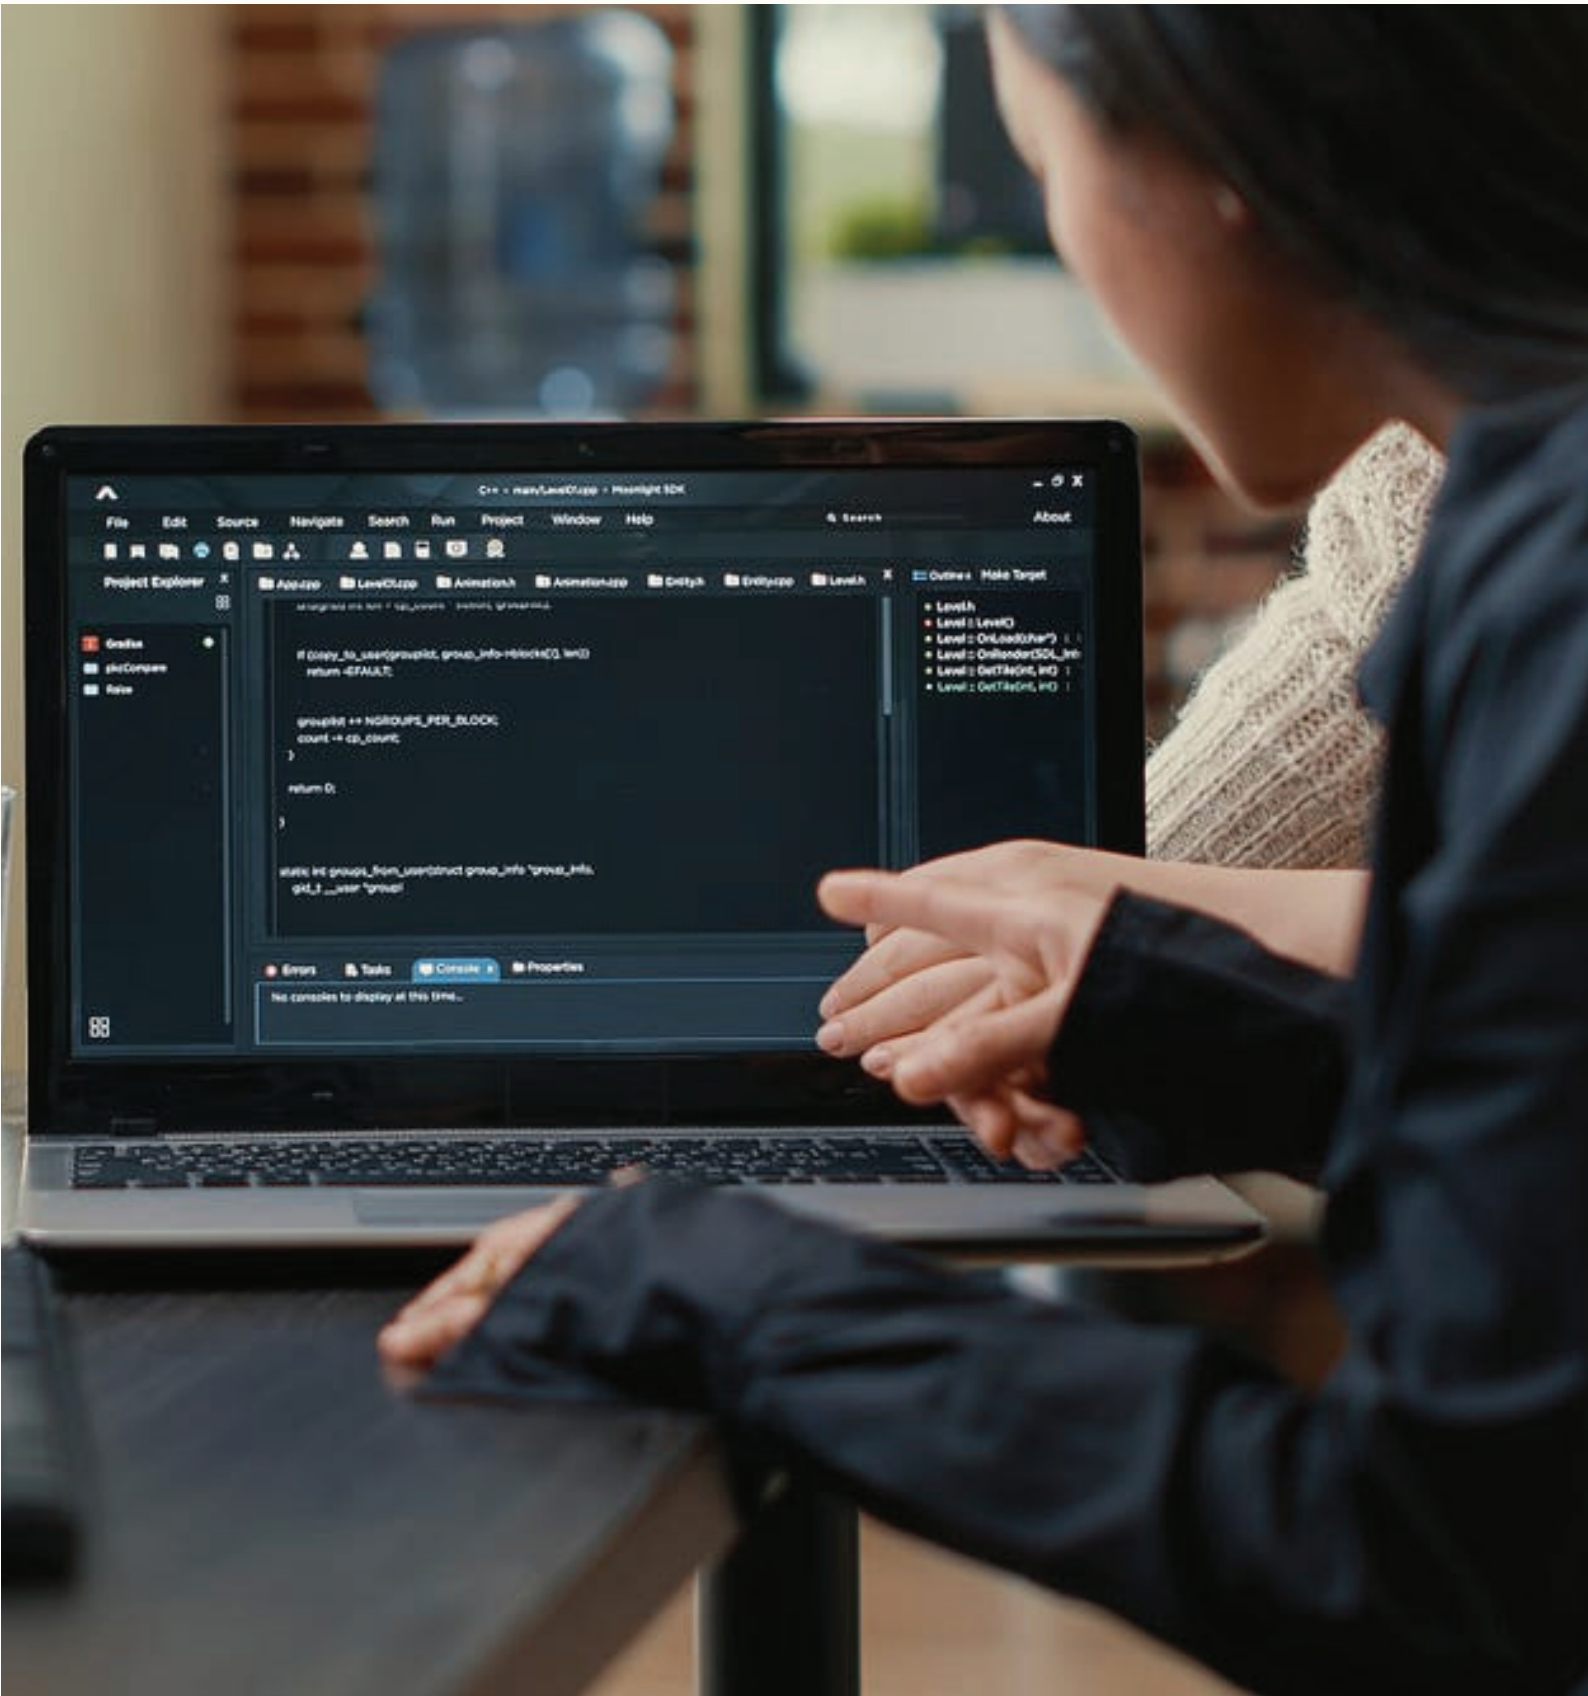

⁕ Scheduling & Task Automation

- Automate tasks with cron jobs
- Output redirection and logging
- Hands-on: Schedule a daily backup script

✳ Debugging & Best Practices

- Debug with set -x, trap, and logging
- Writing readable, maintainable scripts
- Bonus: Build your own CLI tool from scratch

What You'll Get After Completing the Course

Certificate of Completion

Earn your Shell Scripting Certification from Eduden, recognized across tech teams in India.

Full Access for 30 Days

Get full access to all scripts, labs, walkthroughs, and downloadable resources — build your own script library for life.

Job & Real-World Read

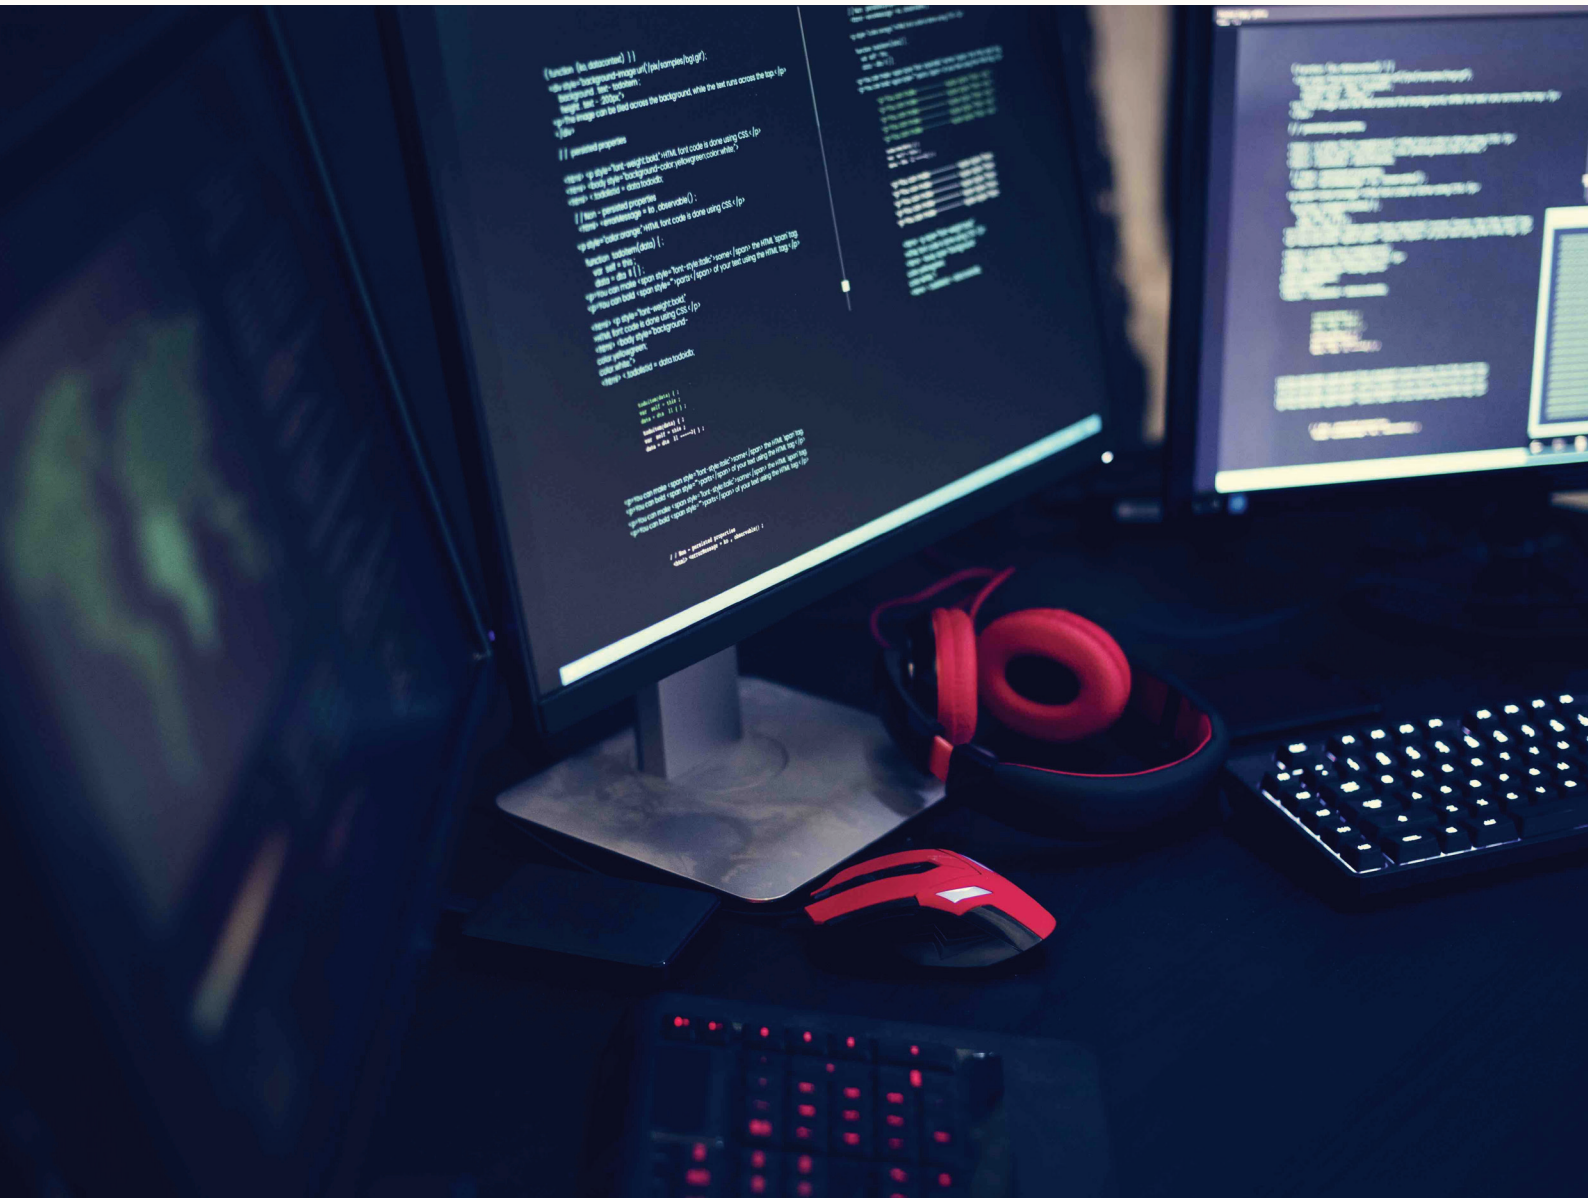

Finish with a solid scripting portfolio and the ability to confidently take on automation in:

- Cybersecurity (automate scanning, logging, enumeration)
- DevOps (scripts for CI/CD & infrastructure management)
- System Administration (backups, monitoring, cron jobs)

Perfect if you're moving toward roles in DevSecOps, Red Team automation, or Linux admin positions.

Course Highlights

- 30-Day Shell Scripting Bootcamp in India
- Best Bash Scripting Course for Beginners in Kolkata
- Write Scripts That Actually Automate Tasks
- Includes 3 Projects + Final Workflow Automation Task
- Certificate from Eduden – India's Most Hands-On Tech Training Institute
- No Coding Background Needed – Learn From Scratch
- Live Mentorship + Weekly Reviews
- Hybrid Format – Online or In-Person in Kolkata
- Perfect for Cybersecurity, IT, DevOps, Admins, and Developers
